

INSTALLING INDIAN LANGUAGES ON YOUR COMPUTER

Step-by-step procedure for installation of various Indian languages in Windows XP and Vista with Office 2007

■ DAMODAR JOSHI

The 'Indian Languages and IT' article published in July 2009 issue of Electronics for You gave readers links to many websites from where they could download the software, patches and fonts for installing Indian languages on their computer systems. Here we discuss the step-by-step procedure for installation of various Indian languages.

Microsoft has dedicated a separate website (www.bhashaindia.com) to Indian languages. This site gives the required language interface packs (LIPs) for Windows-XP, Windows Vista, MS-Office 2003 and MS-Office 2007 editions. Using the given LIPs, you can install many Indian languages in Windows XP and Vista with Office 2007.

System requirements

You should have the genuine Windows operating system installed on your computer. If your system is running a pirated copy of Windows, you cannot download these LIPs. You need a minimum of 512MB RAM and sufficient disk space to download and install the required LIPs. Windows LIP file size is around 2.6 MB and MS-Office LIP file is 15.5 MB. All these LIPs work on a 32-bit operating system only. Keep Windows installation CD-/DVD-ready if the existing Windows operating system is not properly installed and some components are missing.

Installation

Step-by-step procedure to install Indian languages on the Microsoft Windows XP Professional Version 2002

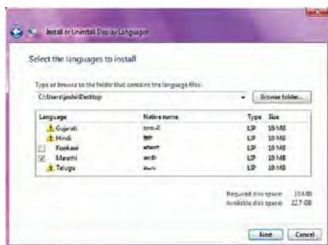

Fig. 1: List showing multiple languages

with Service Pack 2 and 512MB RAM is as below:

1. Go to www.bhashaindia.com website
2. Click 'Download' in 'Tools' menu option
3. You will see a list of Indian languages on the screen. Under 'Windows XP LIP' option, click the language that you want to install. Then the website checks whether you have the genuine Windows installed on your computer (this takes a few minutes). Download is allowed only if Windows installed is genuine
4. Press 'Download' button and save the LIP file on your computer
5. After download, go to the location on your computer where you

have saved this file and double-click it. Installation starts by showing one pop-up box

6. If you have downloaded multiple LIP files, a list of languages is shown. From the list, select the desired language. If you have downloaded a single LIP file, only that will be shown. Select this language and press 'Next' button (refer Fig. 1)

7. In the next menu, select 'I accept the licence terms' and press 'Next'

8. The next box shows you the readme file information. Here also, press 'Next' followed by 'Install' button

9. Check the box against 'Change my display language to.' Do not select 'Apply changes to my system accounts' as this may change your system accounts into regional language

10. Now, reboot your system

11. Press 'Start' button. You will see the menu in the installed language

With this installation, only the display is changed to the required language. You can see the menus in that language but you cannot type in that language. You have to install the language for input as described in the next section.
