

Installing the language for input

1. Go to 'Control Panel,' select 'Regional' and 'Language' options
2. Select Languages→Details→Settings→Add
3. Select 'Keyboard' option. 'Add Input Language' window appears
4. Select your desired language from this window

Now your desired language is installed for input also. The language tool bar will appear on your computer screen. Select the desired language from the tool bar. Now you can type in this language in MS Word also.

You can install many LIPs (language interface packs) on one computer, but only one language at a time will be used for displaying the Windows menus. You can change from one language to another by selecting the desired language from the menu. Thereafter, reboot the system or log off the machine to effect the changes.

Changing from one language to another for display

1. Go to 'Control Panel,' select 'Regional' and 'Language' options
2. Select Languages→Details→Settings→Add
3. Select 'Keyboard' option. 'Add Input Language' window appears
4. Select your desired language from this window
5. Restart your system to make the changes take effect

Installing the MS-Office in regional language on your computer

There are different LIPs available for MS-Office. Download the required Office language pack from www.bhashaindia.com website. This website provides office LIPs for MS-Office 2007 and MS-Office 2003 only. Double-click the regional language option, say, Telugu, to download the setup program and accept the Microsoft terms and conditions for using this pack. Press 'Continue.' This successfully installs

the language pack for Office.

Here Office means MS Word, MS Excel and MS Power Point. This language pack does not apply to other office products. With this installation, your menus in default MS Word (in English) will not immediately change to the installed regional language. You have to change the Windows display language to the one you have chosen for MS Office. For example, if you have installed the MS Office pack for Telugu language, you should select the

Office appears in English

Removing the Windows display LIPs from system. 1. From 'Control Panel' option, select 'Regional' and 'Language' options

2. Select 'Languages' option
3. Press 'Install/Uninstall Languages'
4. In the next menu, select 'Remove Languages' and the languages that you want to remove
5. Press 'Next' button
6. Press 'Remove' button

Fig. 2: MS-Word menu in Telugu

Windows display language to Telugu. Then only MS Office will be shown in Telugu language (see Fig. 2).

To type in Telugu, select the input language to Telugu from the language tool bar. Now the input language is Telugu and the menus in the Word are also in Telugu, but you will still get the help in English language only. We have installed Telugu, Marathi and Hindi office LIPs on MS-Office 2007 under Windows XP operating system and found working well.

Uninstallation

If you are not interested in keeping these installed language packs on your computer, you can remove them as follows:

- Removing the LIP for MS-Office.** 1. Select 'Control Panel' from 'Start' menu
2. Choose 'Add or Remove Programs' option. Then the list of installed programs will be displayed
 3. Select the office language pack that is to be removed
 4. Press 'Uninstall' button
 5. The program is removed permanently and now your menu for MS-

7. A message appears stating that the selected language is removed successfully and you have to restart the computer

Limitations

Only those 80 per cent of the Windows menus which are mostly used, are changed to the installed regional language. It is not 100 per cent changeover to the installed regional language.

Third-party installed software is shown in English only. You still get help in English only. Also, you cannot install more than ten language packs at a time.

Precautions

Take the backup of the important data files on your computer before trying this installation. In case you are unable to operate on regional language settings and/or are not immediately able to revert back to English Language, this backup will be useful for you and you will not lose your valuable data. ●
