

North America is expected to increase at a compound annual growth rate (CAGR) of 42 per cent and 55 per cent, respectively. In 2010, the average North American user is expected to consume 159 megabytes of data—up from 100 megabytes in 2009.

"Mobile voice has already been surpassed by mobile data traffic on some networks, and this trend will only accelerate," says ABI Research wireless analyst Bhavya Khanna. "This boom in usage is driven by the rapid adoption of smartphones in these markets."

But the explosion in data traffic does not mean a corresponding rise in data revenues for operators, as the popularity of unlimited or fixed price plans caps revenue even as usage grows. Mobile data revenues are expected to grow at a CAGR of about 18 per cent in North America, in sharp contrast to the increase in usage. This presents a challenge for operators as they look to manage the demands on their networks without a corresponding increase in income.

LED product manufacturers' association floated

LED Product Manufacturers' Association (LEDMA) has been formed to address the issues of the growing LED industry and to make people aware of the future lighting technology. It will serve as a platform for LED product manufacturers across the country to strengthen and develop the LED industry.

The association aims to promote awareness about solidstate lighting and introduce energy-efficient lighting systems that make optimal use of available power resources in India. LEDMA also seeks to draw the government's attention towards subsidy for LED lighting products and hopes to help waiving-off of taxes as in the case of solar products in the country.

A constitutional body has been formed under the Andhra Pradesh Societies Registration Act, 2001 in Hyderabad and the association plans to build its zonal presence in the future.
