

Do-It-Yourself Arduino Projects: Listings And Resources

If you are looking for help to get started with the Arduino and itching to get on with a project, check out these websites for tutorials, listings of cool do-it-yourself projects and helpful step-by-step guides

Instructables

This website is an extensive pool of 'how-to' related documentation for almost anything and everything on Arduino. An active community of Arduino enthusiasts shares cool projects with detailed step-by-step instructions. Apart from projects, you can learn to build your very own barebones version of the Arduino or interface the Arduino with a wide range of shields and interesting gadgets. The website also hosts fun contests in the Arduino category and judges the participating projects based on innovation and cool quotient.

Hack a Day

This website has a compilation of over 300 Arduino hacks and the number grows each day as the Hack a Day tagline reads "Hack a Day serves up fresh hacks each day, every day from around the Web and a special How-To hack each week." There are numerous posts linking to sites where the discussed Arduino project has been originally hosted. Readers can leave comments and suggestions, or pick on ideas and get on with building their own projects.

Lucky Larry

Lucky Larry mainly focuses on the Arduino and lists projects and tutorials on it complete with programming sketches, parts lists, photos and examples. The number of projects may seem like a limitation but the USP of this website is its in-depth explanation of each project featured. The website also has a very helpful index of links to learning resources, blogs and projects on the Arduino. There is also an archive of Arduino-based robotic projects that one can take up after becoming comfortable with the board.

Hack n Mod

This website has an index of cool Arduino hacks, projects and modifications (or 'mods' that you can carry out with your Arduino board). The website essentially provides a collection of Arduino projects at one place and links to blogs/websites of the project host for the details. Hack n Mod also presents an eclectic list of 'Top 40 Arduino Projects of the Web' with projects such as a wall-avoiding robot, breathalyzer microphone, Web-controlled RC car and Botanicals—the twittering plant!
