

OPTOCOUPERS ARE OLD TECHNOLOGY

VACUUM TUBES
1910-1958

ROTARY PHONES
1920s-1980s

VHS TAPES
1970s-1990s

FLOPPY DISKS
1980s-1990s

OPTOCOUPERS
1960s-2009

INTRODUCING THE ISOpro™ FAMILY FROM SILICON LABS—ISOLATION TECHNOLOGY FOR THE 21ST CENTURY.

Say hello to the ISOpro family of digital isolator and ISOdriver solutions from Silicon Labs and say goodbye to the limitations of optocouplers. ISOpro isolators feature ultra low power consumption even at incredibly fast data rates, robust multi-channel and bi-directional communications and reliability unachievable with optocouplers. ISOdrivers combine our digital isolator technology with gate drivers, delivering up to 4 A peak output current.

THE LOWEST POWER CONSUMPTION EVEN AT VERY HIGH DATA RATES

Based on our patented RF isolation architecture, ISOpro digital isolators offer the lowest power consumption at data rates up to 150 Mbps. Power consumption stays low even as data rates increase.

ROBUST AND RELIABLE OPERATION THAT YOUR APPLICATIONS DEMAND

ISOpro isolators and ISOdrivers lead the industry in data rate, propagation delay, RF immunity, ESD and jitter performance. And they excel in even the harshest environments.

MULTI-CHANNEL AND BI- DIRECTIONAL COMMUNICATIONS— IT'S ALL IN THE FAMILY

ISOpro digital isolators are designed for a wide range of demanding applications. With a small footprint, up to 5 kV isolation and up to 6 channels, we've got a solution for all of your isolation needs.

Tired of your existing opto+driver solution? Take the ISOdriver Challenge:
