

Exciting DESIGN SOFTWARE and Raspberry-Flavoured OPERATING SYSTEMS

SHANOSH KUMAR

Raspbian NOOBS

New Out Of Box Software, or NOOBS, was introduced on June 13, 2013. It makes Raspberry Pi easier to use by simplifying the installation of an operating system (OS). Instead of using specific software to prepare a secure digital (SD) card, files can be unzipped and contents copied over to a File Allocation Table (FAT) formatted file system (4GB or bigger) SD card, which can then be booted on Raspberry Pi. A choice of six OSes is presented for installation on the card.

RISC OS Open

The official RISC OS distribution for Raspberry Pi, RISC OS, is a British OS designed specifically for the ARM processor by the team who created the original ARM. It is fast, compact, efficient and developed, tested by the loyal community of open source software developers and users. RISC OS is not related to Linux or Windows platforms. It has its own set of unique features and aspects for OS design.

Logisim

Logisim is an educational tool for designing and simulating digital logic circuits. It is equipped with a simple toolbar interface and simulation of circuits as you build these. The software is simple enough to facilitate learning of most basic concepts related to logic circuits. It has the capacity to build larger circuits from smaller sub-circuits and to draw bundles of wires with a single drag of the mouse. Logisim can be used to design and simulate entire central processing units for educational and learning purposes.

Some popular resources

Jaspersoft Studio. Jaspersoft Studio is a free, open source, Eclipse based report designer for JasperReports and JasperReports Server. It helps users create sophisticated layouts, which can contain charts, images, sub-reports, crosstabs and many more types of illustrations. Jaspersoft Studio facilitates them to access data through JDBC, TableModels, JavaBeans, EXtensive Markup Language (XML), Hibernate, comma separated values and custom sources. They can use this tool to publish reports in formats such as PDF, RTF, XML, XLS, CSV, HTML, XHTML, text, DOCX or OpenOffice.

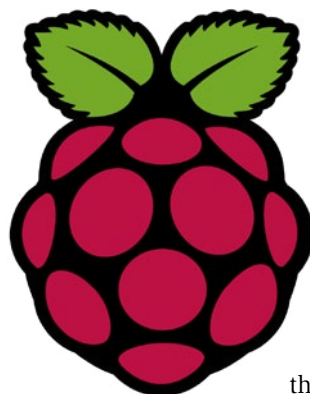

Eraser 6.2.0.2970. Eraser is a secure data-removal tool for Windows. It completely removes sensitive data from the hard drive by overwriting it several times with carefully-selected patterns. The software erases residue from deleted files including managed file transfer (MFT) and MFT-resident files (for NTFS volumes) and Directory. It also has a powerful and flexible scheduler.

FreeCAD

FreeCAD is a general-purpose feature based, parametric three-dimensional modeller for computer-aided design, MCAD, computer-aided technologies, computer-aided engineering and product lifecycle management. It is aimed at mechanical engineering and product designing due to the fact that it fits a wider range of uses in engineering such as architecture and other engineering areas. FreeCAD provides for very advanced extensions and customisations.

FreeCAD-PCB

FreeCAD-PCB allows you to design printed circuit boards that can be imported to FreeCAD. It is loaded with the latest features that support many layers. It allows users to design models with different names, colours and transparency settings for added customisation. It allows them to import Initial Graphics Exchange Specification models with

colours, too. FreeCAD-PCB is equipped with the latest updates this season.

Logic Friday

Logic Friday is a free software for Boolean logic optimisation, analysis and synthesis.

It lets users ease over the process by simultaneously viewing and accessing a number of windows, namely, functions, truth tables, equations and gate diagrams. The software takes help of Espresso logic minimiser to efficiently reduce the functions in an electronic design.

Users can optimise diagrams for standard integrated circuits that will minimise the total number of integrated circuit packages in the design, or optimise for die area, letting the program choose gates to create a custom integrated circuit with minimum die area. **EFY**
