

Government invests ₹ 5 billion a year for research on electronics

Aruna Sharma, IAS, secretary, government's Department of Electronics and IT (DeiTY), who was the chief guest at CSR Leadership Conference, organised by NASSCOM Foundation, said that the government is investing ₹ 5 billion per year on research related to electronics products. The research is carried out at incubation centres associated with IITs, Indian Institute of Science and other premier institutes.

A deal between DeiTY and NASSCOM Foundation was also announced, wherein the foundation has been

entrusted upon the responsibility of sensitising citizens across the country on e-waste, its health and environmental hazards and its responsible disposal.

The foundation has secured grants in excess of ₹ 500 million in the financial year 2016-17. It is the industry partner to the government for National Digital Literacy Mission and has been able to reach its target of over 100 centres across India and aims to make over 75,000 households become digitally literate.

₹ 1.2 trillion investment in electronics manufacturing

With efforts on to make India an electronics manufacturing hub, total investment in the sector has now reached ₹ 1.2 trillion, according to telecom minister Ravi Shankar Prasad.

"We would like to say that by 2020, India must also promote export of consumer goods. I want to assure this House [Lok Sabha] that a large number of companies are keen to invest in India and we are creating an enabling atmosphere," the minister said.

He also said that two companies have shown interest in electronics chip manufacturing and government's efforts are to make India an important centre of chip manufacturing.

He added that India is now making about 110 million units of mobile phones. That is a growth of 83 per cent in quantity terms in a year. Growth of LEDs is 37 per cent, LED lights is 65 per cent and tablets is 27 per cent.

Electronic goods imports rise to ₹ 2.256 trillion

Total import of electronics goods grew over 15 per cent to reach an estimated ₹ 2.256 trillion in 2014-15 over the previous fiscal.

According to telecom minister Ravi Shankar Prasad, total import of electronics goods during 2012-13, 2013-14 and 2014-15 (estimated) as per the figures of Directorate General of Commercial Intelligence and Statistics (DGCIS) was ₹ 1.790 trillion, ₹ 1.959 trillion and ₹ 2.256 trillion, respectively.

He added that total production of electronic goods based on figures provided by the respective electronics industry associations was ₹ 1.641 trillion, ₹ 1.804 trillion and 1.903 trillion during 2012-13, 2013-14 and 2014-15 (estimated), respectively.

Comparison of total production with import of electronic goods suggests that indigenous production of electronic goods is not sufficient to meet domestic demand.

On The Move
