

Microcontroller

In comparison with earlier XMC1000 products, the new XMC1400 series offers greater control performance and additional connectivity. XMC1400 uses ARM Cortex-M0 processor and provides comprehensive peripheral functionality tailored carefully to their target applications. These include actuators in industrial automation, digital power conversion for control of LED lamps and multi-phase electric motors and electronic control of small combustion engines such as those in lawnmowers, chainsaws or generators.

Constant-current driver IC

Key features include:

1. Primary-side regulation
2. High voltage power MOSFET integrated
3. High constant-current accuracy of $\pm 3\%$
4. Low bills of material cost; PF > 0.5
5. Cycle-by-cycle current limiting
6. Output short/open circuit protection
7. Over-temperature protection
8. SD660X for LED spotlight, downlight and more

Infotainment processor

Texas Instruments has announced the addition of an entry infotainment processor for display audio, radio/audio and other cost-sensitive in-vehicle segments to the Jacinto 6 family of system on chips. The new DRA71x processor is developed on the same architecture as other Jacinto 6 devices, enabling automotive manufacturers to scale their investment without additional R&D or significant bill of material increases to deliver a diverse portfolio of products with hardware and software compatibility. The scal-

able performance within DRA71x allows developers to target specific performance for their applications and leverage headroom using higher-performance variants, if required, without software modifications or hardware changes.

Digital clampmeter

27T-Auto is a 3½-digit 2000-counts digital clampmeter having current range up to 400A AC and voltage range of 600V AC and 600V DC of 25mm. Basic accuracy for AC current is $\pm 2\%$ rdg + 3dgt, for AC voltage $\pm 1.2\%$ rdg + 3dgt and for DC voltage $\pm 0.8\%$ rdg + 3dgt. In addition, it has features like NCV, temperature, max function, resistance, audible continuity and diode test function.

Data loggers

Gipitronix has launched a series of panel-mounted instruments including single-channel and multi-channel data loggers. These are built using high-quality components, unique design methodology and elaborate manufacturing process for tough environments. These are available in standard enclosures with either graphical LCD or 7-segment LED displays.

These data loggers are useful for many industrial and laboratory applications that require data acquisition and analysis for ensuring and enhancing the quality of products and processes.

Video borescope

FLIR VS70 is a tough shock-resistant videoscope that features intuitive handset controls that enable users to manoeuvre the narrow camera probe into extremely tight spaces to deliver sharp, vivid video and images.

Advanced inspection solutions, expansion cameras and add-on accessories enable users to expand VS70 to address many different applications like building inspections, industrial maintenance, aircraft and marine inspections, vehicle service and HVAC repairs.

Multi-utility T&M solution

Scientech DesignLab2 is a solution for engineers in design, application and in-field services, as it saves space, tests faster, troubleshoots faster, enables large storage of waveforms on PC and has an event scheduler to automate testing time, among other features. DesignLab2 aims to replace the existing big-size lab setup into a compact, innovative, portable, affordable and powerful solution.

Hipot testers

Slaughter introduces 0290 series hipot testers, which are cost-effective and easy to use for hipot safety testing.

Hipot 0290 series are available in four application-specific models, namely, 0294 DC hipot, 0295 AC hipot, 0296 AC/DC hipot and 0297 AC/DC hipot with IR measurement. All 0290-series models are equipped with ground
