PCB. Authors of this article have purchased ESP8266 module (Sunrom model no. 4255) from Sunrom Technologies and the PCB is designed to suite their requirement.

An application has been implemented to measure room temperature using LM35 temperature sensor and an LED control (on/off) using a Web browser. LM35 is a calibrated temperature sensor, whose sensitivity is 10 milli-volt/1°C, but one can build customised projects also.

ESP8266 can be used in home automation, mesh networks, indus-

Share Your Knowledge

If you are an expert in your field of electronics, why not share your knowledge with the world?

Electronics For You invites electronics professionals and industry experts to write articles on their area of expertise and interest from different perspectives

Some of the topics we want you to write about are:

- Photonics: Optics & Optoelectronics
- Automation
- Power Electronics
- Components
- Telecom

So if you have an interesting topic or original article to share, please let us know at efyeditorial@efy.in

We would love to hear your good ideas too!
