Turn Your PC INTO A TV

EFY BUREAU

As PC monitors become larger, cheaper and of better quality, many people are moving from the traditional TV set to a multi-use computer. With TV-streaming services, on-demand content and TV tuners getting popular, you can have all your media in one place by turning your PC into a TV.

Now, you do not have to choose between your link to the World Wide Web and your favourite television series. With a few devices, you can turn an old computer into a new TV. It will not only save you money, but also reduce needless electronic waste. But how do you go about turning a PC into a TV? Let us find out.

Feed the TV signal. Physically install your hardware to give your

Things you need

- An old computer with at least 10GB of free hard drive space and a reasonably fast processor; more storage room if you plan to record your favourite shows
- A TV tuner or USB based tuner box

computer screen a TV signal. This can be done using a number of devices. Which one you choose will depend on how much you want to spend and the quality of your PC.

Next, choose between a TV tuner card (with or without a graphics card, depending on your computer's capabilities) and an external TV tuner box. The TV tuner card needs to be installed by a professional, so it will provide you with a clear connection to most TV channels.

The external TV tuner box can easily be installed by connecting to your computer's USB port, but the connection is slower, giving you a lower-resolution image.

Install the TV tuner software.

Install the software that comes with your tuner onto your PC. The software will allow you to control the channels and volume through a remote control. It could even enable you to record live TV shows on your computer's hard drive. Insert the disc provided with your hardware and follow the instructions to properly install the software.

Channel surf. You are now ready to surf TV channels on your computer screen since you now have legal access to TV shows that cannot be streamed on the Internet. **EFY**
