

Fig. 2. Author's prototype of Arduino based programmable digital data display

```

}
commandbuffer[i++]='0';
}

if(i>0)

Serial.println((char*)commandbuffer);
lcd.print((char*)commandbuffer);
delay(1000);
lcd.clear();
}

```

Upload the source code to Arduino board.

Hardware setup

Components required for the project are Arduino Uno, HC-05 Bluetooth module, LCD module and Android smartphone.

Connect Bluetooth module. Connect Bluetooth module to Arduino. Connections of Bluetooth module with Arduino are mentioned below:

Bluetooth module	Arduino board
TX	Pin 0 (Rx)
RX	Pin 1 (Tx)
VCC	+5V
GND	GND

Connect LCD. Connect the LCD module to Arduino. Refer circuit diagram (Fig. 1) for connections. Turn on your Arduino and check if the LCD is working properly. You will see some black pixels on the screen.

Testing

To display the message on the LCD

EFY Note

The source code of this project is included in this month's EFY DVD and is also available for free download at source.efymag.com

using the Android based smartphone, download Blue Term application from Google Play Store. Run it and HC-05 Bluetooth module will be detected by your smartphone. Pair your smartphone with HC-05. You can now type the desired message on your smartphone, followed by pressing Enter for transmission to HC-05 connected to Arduino. The message will be displayed on the LCD screen.

Author's prototype is shown in Fig. 2. **EFY**

Vivek Kumar Kamboj is a final-year B.Tech (ECE) student in Jai Parkash Mukand Lal Innovative Engineering & Technology Institute, Radaur, Haryana. His interests include mobile communication and embedded systems
