TEST & MEASUREMENT

Solder joint inspector

Key features include:

- 3D-SJI: Unique COMBO patented technology RGB/phase shift
- IPC standard compliance in 3D
- Tele-centric camera lens
- Multi-angled, oblique cameras
- User-friendly software and touchscreen interface
- Programming software for quick and easy offline program creation
- Real-time process monitoring
- Repair station functionality with full 3D display
- Data-analysis and quality-control software tools

Signal analyser

Anritsu has extended its signal analyser MS2840A product line by adding three new frequency models (3.6GHz, 6GHz and 26.5GHz) to its

current 44.5GHz model supporting excellent narrowband measurement performance in a middle-range signal analyser/spectrum analyser platform. With a dedicated low-phase noise option, 3.6GHz and 6GHz models have excellent close-in SSB phase noise performance as well as new op-

tion functions like the built-in signal generator offered by the previous MS2830A series.

Noise dosimeter

Sound-level monitoring is essential for employees who are exposed to loud noise, to determine what protective measure are required. Extech SL400 personal noise dosimeter with USB interface has been designed to test noise exposure and provide noise surveys. It is compact, lightweight and comes with PC software to control setup and retrieve stored data or analyse real-time measurements.

Classification tester

Features include:

- Can check copper foil thickness fast
- Non-destructive testing can display classification
- Low power consumption
- Battery-operated handheld gauge for measuring copper foil thickness on PCB substrate materials from 12 microns to 70 microns
- It is easy to use; simply touch

the unique soft-touch probe to the copper surface and note the thickness indication. Touch type electric switch cuts off automatically after the test

- Dimensions: 6cm × 2cm × 9cm

Communications security evaluation kit

Renesas has released RX231 communications security evaluation kit. The kit provides both an evaluation board and

a wide range of software, to prevent virus infections over communication channels and disclosure of confidential information and allows embedded devices with strengthened security to be developed easily.

Key features are:

- Implements strong security using RX231's built-in trusted secure IP
- Embedded devices can be protected from unauthorised programs over communications channels such as wireless LAN and USB
