Clove Digital introduces GPS child locator

Provides visibility of a child's movements to parents

gTag is a hardware device plus an Android app, which gives instant updates about when a child reaches or leaves particular places marked by parents. It is easy to lock to a child's bag and comes with a key for removal when the bag needs a wash.

Once you get your gTag, put an active data SIM and charge the device. Meanwhile, create an account on www.clovedigital.com or via Android app gTag from Google Playstore. After signing in, add child details along with gTag ID printed inside the box. You can mark places like school, home, road junctions *en route* and so on on the map and receive instant notifications on your child moving in or out of these places.

Home theatre projector from BenQ

Cinematic performance for your personal silver screen

With cinematic colour fidelity of Rec. 709 compliance and ultra-high contrast performance, W8000 unleashes astounding picture quality for custom home theatres made perfect by CinemaMaster video enhancement and the installation flexibility of H/V lens shift and lens options. By combining pioneering BenQ innovations such as interchangeable six-segment colour wheel with DLP BrilliantColor Technology, the projector accurately reproduces hard-to-match colours such as skin tones and precisely renders Rec.709 and sRGB standards.

Laptop by HP

The world's thinnest laptop

Crafted with durable aluminium and carbon fibre, this impossibly-thin laptop redefines perfection. This featherweight 33cm (13-inch) laptop weighs only 1.1kg and is finished with a durable and scratch-resistant edge-to-edge Corning Gorilla Glass 4 display. Breakthrough hyperbaric cooling technology from Intel actively draws cool air in, rather than just venting heat out. This allows users to utilise a more powerful processor without over-heating. Combined with dynamic power settings that adjust to the workload, this laptop keeps cool and stays at peak performance.

Other key features include 6th-generation Intel Core i7 processor, PCIe based SSD storage up to 512GB, Windows 10 operating system, up to 8GB RAM, 2x2 Wi-Fi antenna and multi-use ports, among others.

Zebronic launches wireless video surveillance door phone

Meets customer's safety requirements with utmost flexibility

ZEB VDP RF from Zebronic is easy to install, since you do not need many tools and cables around the house. With a wide display and inbuilt microphones, it would allow you to see and communicate, unlock the door and also monitor the person on the other side of the entrance door without having to open it. The accompanying camera offers high-quality clear images along with VGA-

quality video on the removable SD card for recording images/video. Even at night, you would not have to strain to decipher. It comes with tamper-proof casing to withstand outdoor wear and tear, thereby ensuring that its functionality or performance remains unaffected.
