Horticulture LED lighting market to grow at 22.5 per cent CAGR up to 2020

Research in 2016 related to the LED lighting market for horticulture applications indicates that one of the latest trends is the development of innovative products. Healthy growth of horticultural crops depends in large part on the amount of sunlight these receive. Long periods of darkness, especially in Nordic countries and north-central Europe, make it difficult for farmers to improve their crop output. Therefore horticulturists are supplementing sunlight with lighting technologies.

As LEDs provide optimum plant light output and are cost-effective,
