Microsoft Cloud is now accredited by the government of India

The union Ministry of Electronics and Information Technology (MeitY) has announced that Microsoft is among the first global Cloud services providers to meet MeitY requirements. This will enable Microsoft to innovate in the digital services space and deliver a robust Cloud computing solution for government agencies in India. This accreditation gives government agencies the green signal to choose Microsoft Cloud when planning their digital transformation and optimising their information technology operations.

Reliance Group launches IoT venture

Anil Ambani-led Reliance Group has launched UNLIMIT, an independent unit, which will provide IoT services. For the launch of this venture, the group has partnered with Cisco Jasper. With this, Reliance becomes the first telco in India to have an independent IoT unit. UNLIMIT makes it simple for companies to deliver connected services throughout India.

PCBPower offers online service

PCBPower has introduced PCB layout service online. It would ensure that all technical issues are addressed during the PCB layout-generation stage itself, allowing customers to focus on their core competencies. Customers can now estimate and calculate the prices besides uploading handwritten schematics, online.

Railways to run fully solar-powered trains

The union minister for railways, Suresh Prabhu, has said that Indian Railways is working towards running purely solar-

powered trains in the future. Prabhu said this after flagging-off the first freight train that features a newly-developed guard van, which uses solar power to run fans and lights.

Cisco to build 100 smart cities

Apart from Nagpur in Maharashtra, Cisco is working closely with other state governments and its partners to digitally transform 14 cities in India. Its CEO, Chuck Robbins, has stated that the company plans to connect 100 cities as part of Digital India initiative. Cisco also announced the availability of three new advanced security software suites, namely, Threat Defense for Data Centres, Threat Defense for WAN and the Edge, and Policy and Threat Defense for Access.

Samsung to launch only 4G smartphones in India

Korean electronics major Samsung will launch only 4G/VoLTE-enabled smartphones in India as the market has shifted totally towards this end. Manu Sharma, vice president - mobile business, Samsung India Electronics, mentioned that nearly 80 per cent of smartphone users have shifted to 4G-enabled handsets.

Sony India targets 20 per cent year-on-year growth

Sony India MD, Kenichiro Hibi, recently visited Chandigarh for three days to understand the festive mood in the city. According to Hibi, Punjab is an important market for Sony India. He added that Sony is a premium brand player in the country and the company will continue to launch products that enhance the customers' lifestyle.

was recently ranked the top solar EPC rooftop player, for consecutive year, for installations done in the commercial, industrial and residential sectors.

The company has won 'D&B Infra Awards 2016' in the project based category for financial and operational excellence in commissioning 12MW solar rooftop project for R.S.S.B. Educational & Environmental Society. The 12MW project is the largest solar rooftop plant in the world, set up in a single phase

at a single premise. Set up under Punjab government's grid-connected rooftop solar projects scheme, the plant produces more than 15 million units of power annually.

The company has also installed several rooftop projects over the last year, especially in the space of educational and religious institutions.

ABB to build solar-powered micro-grid at its largest Indian plant

ABB India is planning to build and install a solar-powered micro-grid at its largest manufacturing facility in India as part of the firm's continued push for greater renewable energy adoption across its operations. The Vadodara facility in Gujarat is the largest plant in ABB India's portfolio. It will receive a 600kW solar rooftop array, battery backup and micro-grid control system to help wean the factory off its current reliance on fossil fuels. It will use a PowerStore battery grid stabilising system, together with a Microgrid Plus dedicated control system, to help maximise the plant's solar power output and ensure an uninterrupted power supply.

Qualcomm to acquire NXP

NXP has agreed to be acquired by Qualcomm. This coming together is based on compelling strategic logic that combines the strengths of two highly-successful and complementary businesses to create a premier semiconductor industry leader. With unique leadership positions in wireless technologies, security and processing, the union is ideally positioned to address the emerging trends of ADAS and autonomous vehicles, the IoT and 5G revolution.

The combination is expected to have annual revenues of more than US\$ 30 billion, serviceable addressable markets of US\$ 138 billion in 2020 and leadership positions across mobile, automotive, the IoT, security and networking segments.

these are gaining traction among horticulturists. Growing preference for LEDs over traditional lighting has encouraged lighting manufacturers to develop innovative LED lighting lamps and fixtures, specific to the horticulture sector.

Tata Power Solar continues reign on solar rooftop space

Tata Power Solar has been a consistent leader in the solar rooftop space with a cumulative rooftop installation upwards of 117MW. It
