TEST & MEASUREMENT

Digital panel meters

KUSAM-MECO has introduced highly-advanced digital panel meters in 96mm x 48mm size. The meters have five-digit display of ± 19999 counts; display range is user selectable. These have an accuracy of $\pm 0.15\%$ FS, and analogue output of 4-20mA, 0-10V, 1-5V, 0-5V, 0-20mA or RS485.

The meters can be provided with high-low, high-high or low-low settings. Auxiliary supply options are 110/220V AC, 24V DC, 110V DC or 85-265V AC/DC. These are available with average and TRMS measurements. Range includes AC voltage, AC current, AC voltage and AC current (with three displays for three-phase measurements).

Power quality and harmonics analyser kit

This 3-phase power and harmonics analyser kit for power measurement and analysis and data-logging of single- and three-phase/ three-wire or three-phase/ four-wire systems comes with 3000A 45.7cm (18-inch) flexible-current clamp probes. The LCD display shows up to 35 parameters on

one screen with harmonics analysis, power analysis, phase analysis and internal menu. Analysis of total harmonic distortion and maximum demand (MDkW, MW, kVA and MVA) is given with programmable period.

Spectrum analyser

Key features of Aplab's new spectrum analyser are:

- Frequency range from 9kHz to 1.5GHz/2.2GHz/3GHz
- RBW: 10Hz to 1MHz, step 1-3-10
- Channel power/ adjacent channel power/occupied bandwidth measurements
- Tracking generator
- USB host, USB device, LAN, RS232

Multi-utility solution

Sciencetech DesignLab3 is an ideal and compact USB-powered high-speed multi-utility solution used in various applications. Along with analogue, digital, protocols generation and

analysis, this USB based platform has capabilities to store, edit, personalise colour of the signal and

screen, edit signal names, markers to analyse signal, print and many more features in its interactive and user-friendly software.

It includes most essential test and measurement instruments like two-channel oscilloscope, function and arbitrary waveform generator, spectrum analyser, frequency and phase meter, pattern generator, logic analyser and data recorder.

Solar module analyser

MECO solar module analyser model 9009 is a portable analyser used for testing, maintenance and finding efficiency of various parameters of solar panels and cells. It can be used to design a solar system to generate specific power. It can identify solar power system requirements, best angle for solar panel installation and broken/worn-out cells.

The analyser 9009 can scan solar cells/panels up to 60V and 12A. It is portable and, hence, can be used in quality assurance at various stages of the production line.

Mobile testing software

Anritsu has developed the industry's first 4x4 MIMO 256QAM evaluation function supporting all 3CC CA band combinations and strengthening the functions of the company's radio communication analyser, MT8821C. With this new release, tests of LTE-
