

Electronics Projects Vol. 26 is the latest volume in the series, available in digital form.

It is a compilation of 21 construction projects and 71 circuit ideas published in Electronics For You magazine.

This collection of tested circuit ideas and construction projects in a handy volume would interest all classes of electronics enthusiasts—be they students, teachers, hobbyists or professionals!

Electronics Projects Vol. 26 is available on the following digital magazine stores:

- www.lulu.com
- www.magzter.com
- rockstand.in
- www.readwhere.com
- pothi.com

understand; that is why the project is based on it.

Test the camera. We have installed all necessary files. Let us see if the camera is ready.

Go to File menu of Python envi-

ronment. Select a new file. A blank Python environment will open (Fig. 5). Open CameraTest.py code for testing the camera. Save and press F5.

You will see the preview for a few seconds and then a .png file will be saved on the desktop. If .png gets saved, you can safely assume that the camera is working. If not, redo the setup carefully.

Final steps. Type the following command against the prompt:

```
>>> sudo idle &
```

Go to File menu of Python shell and open Timelapse1.py code in Python environment (Fig. 5). Save and press Alt + F5 (to execute). To stop execution in Python IDLE, press Ctrl + F6.

Open the destination folder and you will be able to see the captured images stored in the folder. The photos will appear in a systematic manner (Fig. 6). Open Image Viewer

and view photos one after the other, and enjoy.

Now that you have made your own Raspberry Pi time-lapse photography device, the only thing left is to focus the camera at a beautiful location and relax for the preset duration, until the camera does its job. **EFY**
