

BINAY - Lighting Up The Future

BINAY LED-based HIGH, MEDIUM and LOW Intensity Aviation Obstruction Light Beacons

As per International Civil Aviation Organisation (ICAO) requirements Available in Low Intensity, Medium Intensity and High Intensity versions (as per International Civil Aviation Organization guidelines), BINAY's patented LED Aviation Lights come with 5-year/3-year warranties

LED Obstruction Lighting for:

- Industrial chimneys and smokestacks
- Transmission, microwave and cellular towers
- Radio, TV and similar structural towers
- High-rise buildings and structures
- Airports and airfields

The BINAY LED Aviation Obstruction Light offers the following advantages:

- Fit-and-forget maintenance-free operation
- A long life of 100,000 hours (20 years at 12 hours daily burning)
- Pays for itself within a short period of operation in the form of reduced installation, maintenance and servicing costs
- Quick Installation; Reliable operation 365 days per year
- Shock-proof and vibration-resistant
- Over-Designed Intensity to allow for natural LED Intensity degradation over its operating lifetime

THE BINAY LED OBSTRUCTION LIGHT IS UNDER ACCEPTED PATENT, AND AS SUCH IS A PROPRIETARY PRODUCT

POWERING LED TECHNOLOGIES WORLDWIDE SINCE 1983

Wearable robot to help paralytic patients walk

Researchers from Beihang University in China and Aalborg University in Denmark have designed a lower-limb robot exoskeleton—a wearable robot—that features natural knee movement to greatly improve patients' comfort and willing-

ness to wear it for gait rehab. The robotic exoskeleton is intended to help stroke patients strengthen their physical fitness, aid the rehabilitation training of paralysed patients or assist those who need help in performing daily activities.

The team has focused on the knee joint, one of the most complex mechanical systems within the human body and a critical player during gait. The knee joint's motion is actuated by several skeletal muscles along its articular surfaces and its centre of rotation moves.

Sewbo, the world's first robotic tailor

Robots will soon replace tailors and dressmakers. Seattle based startup Sewbo has created the first robotically-sewn t-shirt, which is a step closer to its goal of creating higher quality clothing at lower costs. According to Jonathan Zornow, inventor and founder of Sewbo, simple shapes can already
