

Market Survey:

Will HOME AUTOMATION Create A Bull Market?

Sudeshna Das is senior executive editor at EFY. She prepared this article with inputs from Sneha Ambastha, senior analyst at EFY

The trend of automating home activities by using intelligent terminals to control appliances and equipment has opened up a huge market globally, bringing new and exciting opportunities for technology companies. According to industry experts, the market will be driven by the trend towards energy-efficient, safe, luxurious and convenient homes, popularly called smarthomes.

A report published by MarketsandMarkets, 'APAC Smart Homes Market—By Products, Services and Geography—Analysis & Forecast (2013-2020),' forecasts that the total market for smarthomes in Asia-Pacific region will be worth US\$ 9.28 billion by 2020. And this is just the tip of the iceberg. Going forward, in the era of 4G deployments, mobile service providers will boost these figures further, taking smarthome automa-

"Increasing affordability and awareness of home buyers as well as advantages that home automation brings in terms of convenience, energy savings and safety/security will drive this sector in India. Moreover, the construction segment sees it as a differentiator to attract home buyers."

—Praveen Ganapathy, director - embedded processing, India sales and applications, Texas Instruments India

tion from being a privilege of the few rich to a truly mass-scale opportunity.

Although home automation in India is still a nascent market, in sync with the global trend, the domestic home automation sector will see phenomenal growth in the next few years. According to a research report published by Researchbeam in February

2016, the home automation market in India is expected to grow at a CAGR of 23.63 per cent in the next six years. Metro cities like New Delhi, Mumbai and Hyderabad have the most potential, where penetration is expected to increase further. This trend is being followed in other major cities like Bengaluru and Ahmedabad, too.

Growth drivers

Growth opportunities in the home automation market are due to increasing adoption of automated services and government incentives for green initiatives. The market will also be driven by the increasing demand for energy-efficient solutions and rising security concerns. Factors such as growing employment
