

IEC appliance inlets

SCHURTER has introduced two new appliance inlets, alike to IEC, style C8, for protection class II appliances. The 2577 and 2579 series are designed to

polarise the line contact of the power mains into the appliance. The polarised inlets

are popularly used in portable audio devices, cable boxes, gaming and other consumer products. These offer solid pin construction versus folded pins, ensuring a higher degree of contact integrity.

Ethernet Wi-Fi module

HLK-RM04 is a low-cost embedded UART-ETH- Wi-Fi module (serial port - Ethernet - wireless network)

developed by Shenzhen Hi-Link Electronic Co. Ltd. It is an embedded module based on

the universal serial interface network standard, built-in TCP/IP protocol stack, enabling user serial port, Ethernet, wireless network (Wi-Fi) interface between conversions.

MISCELLANEOUS

Smartwatch

The Iotex xWatch is backed by Indian smartphone vendor Micromax. xWatch allows you to build two-way communication with your child using a GSM network. There is a SIM-card slot to enable standalone 2G (GPRS) connection.

GPS connectivity lets you know the current location of your child. You

can also use the pre-installed geofencing technology to designate authorised and restricted zones even when you are away from your child.

LED chip

Kwality Photonics has launched high-performance medium-power LED KLSL2835W, which is a 150mA LED with 65 lumens/70 lumens output that deliver exceptional brightness, thanks to the specially-designed lead frame profile and improved heat dissipation of the device.

Photo-imageable ink

Key features include:

- Good adhesion and coverage power for copper-clad boards
- Leveled ink coating with no separation, blistering void or pin-hole
- Very good etching resistibility to ensure sharp definition of circuit without burring
- Super-high accuracy enables minimum conductor width/clearance to 2/2mil (0.05/0.05mm)
- Mechanical properties like hardness, adhesion and wear resistance
- Wide operating tolerance limits reduces percentage of rework and reject
- High photographic sensitivity reduces degree of undercut
- Easy removal of ink, thus less pollution
- Acid-resistant value: PH value 1-9,

etching time less than five minutes under $45 \pm 5^\circ\text{C}$

Bore pump controller

BIMM Technologies has come out with a new model BIMM Energy Saver, an energy-saving pump controller for water-level management. It saves energy

while pumping from the bore well as well as takes care of always keeping a full water tank, takes care of over flow, initiates auto early start during peak consumption hours, provides extended pump life and saves cost of flow switch. It is built using Microchip microcontroller and maintenance-free magnetic sensors.

System on chip

Mobileye and STMicroelectronics have announced that the two companies are co-developing the fifth generation of Mobileye's system on chip (SoC), EyeQ5, to act as the central computer performing sensor fusion for fully autonomous driving vehicles starting in 2020. To meet power consumption and performance targets, EyeQ5 will be designed in advanced 10nm or below FinFET technology node and will feature eight multi-threaded CPU cores coupled with 18 cores of Mobileye's next-generation, innovative and well-proven vision processors. These enhancements will increase performance eight times over the current fourth-generation EyeQ4.
