Amosta launches Windows PC

The smallest footprint Windows PC

Amosta, an Indian startup, has launched EEZE PC, initiating what it calls a breakthrough in the field of mobile computing, that is, a complete PC in a very small footprint—so small that it fits inside a keyboard. EEZE PC is essentially a keyboard unit with an inbuilt computer. It can be connected with any monitor to make it an operational PC. This Windows 10 licensed PC can be used as a complete computer unit.

It features 2GB RAM and 32GB flash that is expandable up to 64GB. It is lightweight and easy to use and carry. Other features include Baytrail-CR 3735F quad-core processor, Wi-Fi, Bluetooth, 100Mb LAN, and ports including two USBs, one VGA, one 3.5mm audio jack, one DC jack and one HDMI. It has an ultra-smooth touchpad and 76 full-size keys.

Personal fitness trainer from Panasonic

Taking one step further towards your fitness goal

Panasonic India has launched a new personal fitness trainer, StepFit, which allows users of all ages and strength levels to perform low-impact exercises that can lead to impactful results and a leaner body. Employing the innovative balance exercise

technology, the device not only works on building core body strength but also helps in losing weight by sending strong vibrations. The vibrations result in rapid muscle contractions, resulting in effective full-body workout. A 30-minute workout on StepFit results in burning 360 calories, which is as good as running six kilometres.

StepFit comes with a resistance rope and a wireless remote control for the device. The resistance rope can be adjusted for different strengths and stretch workout postures, allowing users to strengthen muscles of different body parts.

LED TV from Intex

Equipped with Eye Safe T-Matrix technology

Intex Technologies has launched the full-HD 139.7cm (55-inch) LED 5500FHD TV model. It is designed to deliver the ultimate home entertainment experience, with new and improved features providing life-like picture quality. Eye Safe T-Matrix technology removes undue lag and balances every feature smartly, making TV viewing seamless. Its faster response time (9ms) keeps blurry images at bay ensuring that picture clarity remains intact.

The LED TV is crafted with two built-in speakers producing a balanced sound of 10Wx2 over a wide area, coupled with a digital noise filter (both visible and audible) for a cinematic sound experience.

GizMo ByTes

Security app from Alibaba Group

Chinese mobile Internet giant Alibaba Group has launched Privacy Knight, India's first free app-lock that protects mobile privacy from intruders. The app enables users to unlock their protected apps through a one-second selfie. The app's Face Lock and Blink Detection settings ensure 99.47 per cent accuracy of face recognition. Privacy Knight requests no user information to be uploaded, since Face Lock is accessible offline.

Stock market game app

Hedge Equities, a leading financial services company, has launched the Android based mobile game app *TORO e ORSO* (Italian for bull and bear), which is a single-player game and has three levels: beginner, amateur and professional. While the beginner level has ten rounds, amateur and professional levels have 20 and 40 rounds, respectively. Initially, players get a virtual amount of ₹ 5000, which can be used to invest in any one of the ten sectors—oil and gas, telecom, FMCG, automobile, realty, pharma, power, IT, metal and banking.

App for handwritten equations

Mathpix, an iOS app, looks and feels like a regular camera app until you bring the on-screen rectangular box over handwritten equations. Once it highlights these as green by using image recognition, the app sends the equations to a server, which is equipped with powerful deep-learning algorithms that become better every time these get new data.

App to detect earthquakes

MyShake app crowdsources ground-shaking information from smartphones to detect earthquakes and eventually warns users of impending jolts from nearby quakes. It runs in the background and draws little power, so that a phone's onboard accelerometer can record local shaking any time of the day or night.
