

FEEDBACK

YOUR SUGGESTIONS

THANKS!

I have been a regular reader of EFY for the last 30 years and have a collection of all issues of the magazine since 1989, along with 11 volumes of Electronic Projects since 1969. I am thankful to EFY for developing my interest and passion in hobby electronics. EFY keeps us up to date and gives valuable information about future technologies.

Recently, an unbelievable incident took place that I would like to share. I brought a 3D virtual reality box from Amazon without much knowledge about it. I was interested to know about the box and associated technology. When I got my copy of EFY the next day, I found that the same topic was EFY's theme for that month. This is not the first time; on many occasions EFY has published topics I was looking for.

Due to my association with EFY since student life, I have been able to develop many gadgets for household as well as for industrial usage. Moreover, some of my construction projects have been published in EFY, including energy saver for welding transformer and 8-team quiz buzzer.

I would like to give my special thanks to EFY editor and his team for presenting such a beautiful, technical magazine, and maintaining its taste, values and ethics. This is the only magazine, perhaps, in the world where no vulgar advertisements are published. We are really grateful to the editor for maintaining such business ethics.

Gautam Kumar Mandal

ARTICLE ON RC DRONE

I am subscriber to EFY Plus. It is a great magazine and your efforts to put good articles in it are great!

DIY articles printed are very inter-

FROM FACEBOOK

EFY's Electronics Design Community

The 'Plus-Minus 5V Supply From 9V Battery' DIY article published in February issue is one of my favourite circuits.

Andrius Rakutukavi

'Plus-Minus 5V Supply From 9V Battery' circuit is very useful for hobbyists and students.

Pawan Kumar

Corrections

In 'Driving A Wireless Robotic Car Using IR Sensors' DIY article published in May issue, the PCB layout and component layout are slightly different. Some of the routed tracks are changed in the PCB layout. For example, connections of resistors R22, R13 and R14 in the component layout are different from those of the PCB layout.

A. Samiuddin

In 'Driving A Wireless Robotic Car Using IR Sensors' DIY article, polarity of all photodiode pairs (IRRX1 to IRRX4) are wrongly shown in reverse order in the component layout of the PCB of the transmitter circuit (Fig. 6).

Tanmay Dasgupta

EFY. Thanks for pointing out the mistakes!

esting, too. I request you to publish one on how to make an RC drone at home in a forthcoming issue. My friends, who also subscribe to this magazine, are also interested in this article. Once again, thanks for publishing such a great magazine!

Suyog Kalani

Through email

EFY. Thanks for the feedback and request! We will try to publish the

mentioned DIY article in one of our forthcoming issues.

MULTI-MODE AUDIO AMPLIFIER

Can I use '4-Channel Multi-Mode Audio Amplifier' DIY circuit published in March issue for a home theatre system? If not, what are the required changes?

Abhijit

Through email

The author Petre Tzv Petrov replies:

Yes, you can use this circuit as an end power stage of an audio system with four channels.

If you use two boards, you can have up to eight audio channels. In home application, 5W to 10W of power per channel is more than enough. If you need more power per channel, you can use the channels in parallel, but carefully note the correct polarity (the phase) of the signals. Always refer the data sheet. Also, pay attention to the connections of the loudspeakers.

ROBOTIC PROJECTS

I am a final-year BE student in electronics and telecommunications. Please suggest some projects on robotics.

Shaikh Mubassira

Through email

EFY. Many projects have been published in EFY on robotics. You may refer to our previous issues of EFY. Recent projects published are given below.

- Arduino Based Gesture-Controlled Robot, published in July, 2015
- Colour-Sensing Robot with MATLAB, published in February, 2014
- Arduino-Controlled Namaste Greeting Robot, published in April, 2014
