

ACCESSING WI-FI ON PC WITHOUT WLAN Using Android Smartphone

MADHURAM MISHRA

Your Android smartphone can act as a Wi-Fi adaptor for your old desktop PC or laptop that does not have Wi-Fi hardware. The PC will recognise this as a wired connection in Windows 7. The procedure is very simple as explained below.

Set up and connection procedure

1. Connect the smartphone to the desired Wi-Fi network/router.
2. Plug the USB cable to your PC and connect the other end of the micro-USB cable to your smartphone.
3. In the settings of your Android smartphone, select USB Tethering and Portable Hotspot as shown in Fig. 1 and USB Tethering in Fig. 2. There are different ways of accessing Settings on an Android smartphone. To go to USB tethering, select More under General Settings window as shown in

Fig. 1: Tethering and Portable Hotspot settings

- Fig. 3. Next, click on Tethering and Portable Hotspot shown in Fig. 4. Then, slide USB Tethering towards right as shown in Fig. 5.
4. You will see that a wired connection is recognised by Windows 7 PC or laptop. Your PC can get full

- access to the network to which the Android device is connected.
5. Some firewall software in Android smartphone device can restrict Internet access to the connected PC. By disabling the firewall on the smartphone, you can give Internet access to Windows PC.
 6. If Wi-Fi router is not available, you can access Internet on your PC through 3G or 2G network of your smartphone in the same way. **EFY**
