

said objects. It can help turn any surface into a camera—the invention may lead to card-size cameras that can flex in order to increase their field-of-view.

Regular cameras take pictures from a single point in space, but this new device instead seeks to capture images using a flat grid of miniature cameras—something like an insect's compound eye.

One possible approach for a camera that is a flexible sheet would involve rigid lenses attached to a pliable sheet.

A flexible camera that can be wrapped around everyday objects to capture images that cannot be taken with one or more conventional cameras (Image courtesy: www.mono-live.com)

However, bending this sheet would result in gaps between the fields-of-views of the adjacent lenses. This could cause the resulting image to have missing information.

Instead, the researchers developed an elastic sheet made of flexible lenses. No matter how this sheet is bent, there are no gaps between the lenses. They developed a flexible array that consists of nearly 1100 lenses made of silicone rubber. By optimising the geometrical proportions of the lenses and the material properties of the sheet, they found that this array could produce high-quality images even when bent and twisted.

Miniature DNA thermometer, 20,000 times smaller than human hair

The trend of miniaturisation has now transformed a thermometer to a futuristic nano-scale device. A group of researchers from University of Montreal, Canada, has fabricated an ultra-small, programmable DNA thermometer, which is 20,000 times smaller than human hair. This invention is likely to produce accurate results over a wide range of temperatures and result in a linear ultra-sensitive response curve between fluorescence marker and temperature.

According to scientists, DNAs are heat-responsive. Simply putting, when excess heat is incident on the target

BINAY - Lighting Up The Future

BINAY LED-based HIGH, MEDIUM AND LOW Intensity Aviation Obstruction Light Beacons

As per International Civil Aviation Organisation (ICAO) requirements Available in Low Intensity, Medium Intensity and High Intensity versions (as per International Civil Aviation Organization guidelines), BINAY's patented LED Aviation Lights come with 5-year/3-year warranties

LED Obstruction Lighting for:

- Industrial chimneys and smokestacks
- Transmission, microwave and cellular towers
- Radio, TV and similar structural towers
- High-rise buildings and structures
- Airports and airfields

The BINAY LED Aviation Obstruction Light offers the following advantages:

- Fit-and-forget maintenance-free operation
- A long life of 100,000 hours (20 years at 12 hours daily burning)
- Pays for itself within a short period of operation in the form of reduced installation, maintenance and servicing costs
- Quick Installation; Reliable operation 365 days per year
- Shock-proof and vibration-resistant
- Over-Designed Intensity to allow for natural LED intensity degradation over its operating lifetime

THE BINAY LED OBSTRUCTION LIGHT IS UNDER ACCEPTED PATENT, AND AS SUCH IS A PROPRIETARY PRODUCT
