

USEFUL WEBSITES

3D MODELLING

Every hobbyist needs a 3D modelling tool to create a 3D model of the object he or she is dreaming of. This month we introduce some of the websites that will help you learn and explore your skills in this field

Compiled by **NIRAJ SAHAY**

digitaltutors.com

This website offers a wide range of tutorials to sharpen your skills. It helps you to learn powerful 3D modelling software, techniques and workflows to create your own characters and assets. You can watch video tutorials and get training from creative professionals and grow your modelling knowledge.

hongkiat.com

The process of creating 3D graphics can be divided into three basic phases: 3D modelling, 3D animation and 3D rendering. The website, hongkiat.com, has a list of 20+ free 3D modelling applications you should not miss. The list includes nearly all open source applications available for 3D modelling. It has a short description of the application, which has been hyperlinked to home page of the application.

blender.org

Blender is a free open source 3D content-creation suite, available for all major operating systems under the GNU general public licence. The site, blender.org, has a dedicated section for tutorials and help. It includes tutorials, user manual, Python scripting and support forums. The tutorial section includes ever-increasing list of the Blender tutorials ranging from Getting Started to Modelling, Animation, Lighting, Rendering and Compositing. The tutorial, maintained by Jonathan Williamson and Andrew Price, gives details on how to submit your own tutorials, too.

<http://www.blender.org/education-help/tutorials/>

The site is one of the most popular 3D tutorial sites on the web. It has the best free tutorials available online. The developers of the site aim to make it a valuable site for 3D artists. The website not only provides opportunity to learn but also lets you share your expertise with the community. For more information about how to share your tutorial please visit its About Us section.
