Pioneer launches navigation-cum-entertainment system

One solution for all the digital needs on road

Pioneer India Electronics has launched AVIC-F80BT, its premium 'True to Life' navigation-cum-entertainment system. The AVIC-F80BT features 17.8cm wide touch-screen with multicolour LED display. It also features Bluetooth, dual USB slots, touch-slide cross-over settings and steering-wheel control for many cars.

The unit gives you an option to play music from numerous sources like CD-DVD, USB, SD, Radio, Aux, iPhone or Bluetooth. The navigation system has maps of more than 7000 cities and 500,000 towns/villages across India. Besides having a hybrid positioning system that gives the user turn-by-turn guidance and access to a large database of POIs, the AVIC maps offer 3D view for certain landmarks, junction view and signpost view for a true-to-life experience.

Its HDMI feature enables wired or wireless projection of smartphones on the head unit using select Miracast dongles. This enables you to sit back and stream your favourite movies, videos and photos on head-unit screen through a smartphone.

The dual-zone audio-video feature allows rear-seat passengers to enjoy audio or video content on additional rear-seat monitors and headphones, even while the front passenger and driver listen to audio from another source. For the music enthusiasts, it provides 13-band graphic EQ with its unique advanced touch-slide operation, which allows you to fine-tune sound quality just as you like it.

boAt launches digital earphones

One of the lightest for Apple users

boAt has launched DSP4000, a digital earphone with the 'lightning' connector, which is one of world's first lightning jack earphone for Apple users. With 24bit, 48kHz decoding rate, it produces a balanced sound without distortion. The connector has been approved by Apple through their stringent MFI certification.

You can silence the surrounding noise during your daily commute or the drama from your loud neighbours due to its passive noise cancelling feature. DSP4000 offers controls for Play/Pause, Volume and Track selection. Its legendary 120cm boAt flat cables resist tangles and knots, making it easy to use.

It has a stunning lightweight body and a sturdy pair of earphones with softer ear tips for an extended usage and enhanced sound quality. DSP4000 is available on Amazon (introductory offer: ₹ 2999).

Zebronics launches Bluetooth speakers

Available in 5 neon colours, built-in FM radio and mic for travel

Ergonomically designed with the rubberised 'peek a boo' exterior, the cylindrical shaped palm-size speaker can bring your music anywhere outdoors. It produces a loud 360-degree sound fidelity. The speaker seamlessly pairs up with mobile or any Bluetooth compatible device. Its built-in microphone allows you to make and receive calls via a Bluetooth enabled mobile phone at the press of a button. Usable within ten meters of range, it comes with a 3.5mm audio cable and a micro USB charging cable.

Its FM radio lets you enjoy your favourite channels on the move. With its micro TF card slot it also supports music in MP3 and WMA formats for uninterrupted entertainment.

Facebook may let you monetise your content

A survey by Facebook has indicated that the social platform should soon allow users to monetise their content. The feature, however, is currently said to be available to limited users with verified Facebook accounts only. Facebook seems to be taking feedback from select users on what type of revenue earning would interest them. The survey screenshot posted by The Verge shows a question followed by several options.

Next: The Internet of shirts and shoes

IoT startup Evrthing is teaming up with packaging company Avery Dennison to give apparel and footwear products unique identities in Evrthing's software right when these are manufactured. The companies have high hopes for the Janela Smart Products Platform, seeing a potential to reach 10 billion products in the next three years. The system could put a simple form of IoT into the hands of millions of consumers. What they are doing may make it harder to counterfeit desirable products and commit fraud at the returns counter. There could be some fun features for consumers, too. Smartphone apps could read the label and tell a shopper about the product's history, including where it was made, what's in it, and how it was distributed. Evrthing, based in London, was founded in 2011 and has attracted investments from Cisco Systems and Samsung as well.

Google's report says harmful apps dropped

Google's Android Security 2015 Annual Report says the number of Android devices that installed potential harmful apps (PHAs) from Google Play over the course of 2015 had dramatically reduced with the measures it had taken. According to the report, three of its safety practices had resulted in the dramatic improvement, specifically, by checking over 6 billion installed applications daily, scanning 400 million devices every day to check for network based on device threats, and protecting users from unsafe websites and downloads via Safe Browsing on Chrome for Android. The company even improved its machine learning and event correlation to detect potentially harmful behaviour.
