

BINAY - Lighting Up The Future

BINAY LED-based HIGH, MEDIUM and LOW Intensity Aviation Obstruction Light Beacons

As per International Civil Aviation Organisation (ICAO) requirements Available in Low Intensity, Medium Intensity and High Intensity versions (as per International Civil Aviation Organization guidelines), BINAY's patented LED Aviation Lights come with 5-year/3-year warranties

LED Obstruction Lighting for:

- Industrial chimneys and smokestacks
- Transmission, microwave and cellular towers
- Radio, TV and similar structural towers
- High-rise buildings and structures
- Airports and airfields

The BINAY LED Aviation Obstruction Light offers the following advantages:

- Fit-and-forget maintenance-free operation
- A long life of 100,000 hours (20 years at 12 hours daily burning)
- Pays for itself within a short period of operation in the form of reduced installation, maintenance and servicing costs
- Quick Installation; Reliable operation 365 days per year
- Shock-proof and vibration-resistant
- Over-Designed Intensity to allow for natural LED Intensity degradation over its operating lifetime

THE BINAY LED OBSTRUCTION LIGHT IS UNDER ACCEPTED PATENT, AND AS SUCH IS A PROPRIETARY PRODUCT

POWERING LED TECHNOLOGIES WORLDWIDE SINCE 1983

Texas Instruments India hosts 'DIY with TI' program

Texas Instruments (TI) India has hosted the 4th edition of 'DIY with TI' event designed to recognise and encourage TI hobbyists who innovate in their spare time using TI devices, and showcase their creativity with innovations that help solve real-life problems. Over 50 engineers got together in teams at TI in India and showcased their passion for creating simple and innovative solutions with over 20 cool and interesting demos.

This year, Prathap Ghorpade, Manoja Vinnakota and John Roshan Samuel won the Chief Geek award for their DIY project 'Air-O-care' that essentially monitors air quality and measures pollution. Pheroze Verma, Shinjan Pal, Prathap R. and Prathap Srinivasan, Kamath Veena, Sudhakar Singh were recognised as runners-up for their projects on 'Multi Apartment Door-Entry System with Wireless Video and Two-Way Audio' and 'Smart Digital Door Lock and Access Control for Secure Home and Hotels,' respectively.

There were other notable projects in the realm of robotics and smart farming applications.

BlackBerry Radar to drive higher profits for trucking industry

At the 2016 Mid-America Trucking Show, BlackBerry unveiled BlackBerry Radar, a new end-to-end asset tracking system for trucking companies and private fleet operators. With BlackBerry Radar customers can optimise utilisation of their trailers and shipping containers, improve on-time delivery, reduce theft and generate more revenue from each trailer, without having to invest in costly IT infrastructure. BlackBerry Radar provides everything needed to track highly mobile assets, including a self-powered tracking device, an Internet of Things (IoT) platform with cloud based applications, world-class security and visual reports that make it easy to pinpoint the location and status of each asset.

The BlackBerry Radar tracking device takes only minutes to install and generates rich, frequently updated information that enables operations managers, load planners and dispatchers to make the most profitable decisions for their organisations. For example, the device can send real-time alerts whenever a trailer has crossed a user-defined geofence, or when a trailer door has opened or closed. It also monitors GPS location, temperature, humidity and the presence of cargo. To access this data, customers simply log into BlackBerry Radar's secure online portal—from there, they can interact with elegant visualisations and one-click reports that show where their assets are, and what is happening to them.

BlackBerry Radar also provides an extensible architecture and rich application programming interfaces (APIs) to help developers create innovative applications.
