

1,000× Faster Than Competitors

Microchip's SuperFlash® Technology Enables the World's Fastest Erase Times
512 Kb to 64 Mb NOR Flash Memory

Microchip's SuperFlash® technology is an innovative, highly reliable and versatile type of NOR Flash memory. SuperFlash technology utilizes a split-gate cell architecture which eliminates over-erase issues and does not require complex, time consuming erase sequences. As a result, SuperFlash technology products provide extremely fast and consistent erase times that do not degrade over the life of the product. The fast erase times can provide a significant cost savings to customers by minimizing the time required for testing and therefore improving manufacturing throughput.

- Reduces final system test time by as much as two minutes
- Reduces power used during erase/write cycles
- Enables fast firmware updates
