Jaypee quitting the chips manufacturing project

Infrastructure company JP Associates (Jaypee group) has decided to quit the project to set up an electronic chips manufacturing plant at an investment of about 340 billion rupees, according to a recent newspaper report. "They have said, it is not commercially viable at present," according to Aruna Sharma, secretary, Department of Electronics and IT. The plant was to be one of the two approved by the UPA government in 2014.

AMD likely to enter India in a big way

"AMD is looking to come to India in a big way," according to Ravi Shankar Prasad, the Union minister for telecom. The chip maker has already tied up with HSMC to produce some ICs in India. AMD CEO and president, Lisa Su, recently met the minister and conveyed the message that AMD was committed to turn India into a major manufacturing hub.

MP to have world's largest solar plant

The world's largest 750MW solar power plant is going to be set up in Madhya Pradesh's Rewa district. It will beat hands down America's 550MW Desert Sunlight solar project in California, which was commissioned recently. 1500 hectares of land has already been acquired for the project at a cost of 40 billion rupees.

Haryana to attain 4GW solar power capacity by 2022

Haryana has launched a revised solar power policy, like many other states, to align to the central government's capacity addition target. The new solar policy aims at adding 4GW of capacity by 2022. The policy is quite lucrative for small project developers of one to two megawatt capacity, for whom 800-megawatt capacity has already been allocated.

reduce their dependence on components imported from Taiwan and other countries. The units are being given benefits like subsidised land, capital subsidies, reduced power tariffs and better logistics.

LG starts making smartphones in India

LG Electronics has tied up with GDN Enterprises, a part of the Optimus

LED bulb prices drop further

The procurement price for LED bulbs has dropped to 55.90 rupees from the earlier 64.41 rupees under the Domestic Efficient Lighting Programme for the government. This will enable reduction of the retail price under the scheme to around 85 rupees only. The bulb used to cost 310 rupees just 20 months ago!

Separate council formed for mobile industry

Consumer Electronics and Appliances Manufacturers Association (CEAMA), the apex industry body for the consumer electronics and home appliances industry in India, has formed a separate council for the mobile industry, including telecom equipment and mobile phone makers. The council in collaboration with other industry associations will present an industry consensus view to the government on crucial issues pertaining to the growth and development of the Indian mobility industry. It will also support the government's initiative to promote manufacturing in India.

Intel report shows IT budgets will focus on cloud

Intel Security has released 'Blue Skies Ahead? The State of Cloud Adoption,' a global report advocating the need for technology vendors to help businesses, governments and consumers understand the implications surrounding the growing adoption of the cloud. With a majority (77 per cent) of participants noting that their organisations trust cloud computing more than a year ago, just 13 per cent completely trust public cloud providers to secure sensitive data. These findings highlight improved trust and security are critical to encouraging continued adoption of the cloud.

group in New Delhi, to start manufacturing smartphones in its brand name within India. It is reported to have started with trial production of two models to begin with.

Local manufacture will help LG in reducing costs as duties and taxes applicable will come down. Optimus already manufactures for brands like HTC and Oppo, and is now tying up with Taiwan's leading

contract manufacturer Wistron to set up another plant.

LG is planning, it seems, to introduce 6-7 new models customised for the local market in order to regain its share of the business. LG's consumer electronics and allied business grew by 12% in India in 2014-15 after three years of no growth.

ECIL's golden jubilee next year

Electronics Corporation of India (ECIL), Hyderabad, has completed 49 years of its service and is on the way to celebrate golden jubilee next year. It was set up on 11th April, 1967 with self-reliance as its guiding principle.

The company is known for having pioneered a number of indigenous products and technologies such as EC TV, digital computers, cockpit voice recorders, programmable logic controllers, deep space network antennae and electronic voting machine. ECIL has been in the forefront of design and manufacture of many defence related products such as active radar seekers, integrated security systems and C41 systems for missile programmes, synchros and gyros used in gun control systems for battle tanks and vehicles.

ECIL has been developing and supplying equipment to international discovery science projects such as Large Hadron Collider of CERN, International Thermonuclear Experimental Reactor, France and the Facility for Antiproton and Ion Research, Germany. The cancer hospital information management system developed by ECIL is an integrated online transaction processing system for cancer hospitals and medical institutions.

The highly respected Dr A.S. Rao was ECIL's first managing director while P. Sudhakar is the present chairman and managing director.
