Pushbutton switches

SCHURTER's MSM LA and MSM LA CS latching-action stainless steel and ceramic surface push-button switches are available with a maximum rated switching current of 16 A at 250V AC, up-rated from 12A. Designed for primary on/off switching, the up-rating on MSM LA and LA CS expands on their suitability for use in appliances with higher loads.

Microcontrollers

Renesas Electronics has announced RL78/G11 group of microcontrollers, a group of small-package, low-power microcontrollers that will enable you to easily and more quickly prototype and develop systems that support low-power sensor hubs and sensor application systems. Designed to connect to multiple sensors and convert the sensor output signals to digital data, these compact sensor hubs are used in a wide range of applications.

MEMS oscillators

Microchip Technology has announced the DSC6000 family of micro-electro-

mechanical systems (MEMS) oscillators. These oscillators are excellent for use as clock references in small, battery-powered devices such as wearables and the Internet of Things (IoT) devices in which small size, low power consumption and long-term reliability are paramount. They also meet the stringent mechanical durability and reliability requirements within Automotive Electronics Council standard Q100 (AEC-Q100).

TEST & MEASUREMENT

Thermal imaging camera

FLIR Exx-Series, the advanced thermal imaging camera, troubleshoots more efficiently and faster, finds hotspots, overheated equipment's, creates detailed reports and shares images. Temperature range up to 650°C helps you measure hotter-running equipment more accurately, so you know whether it is operating safely or

not with an accuracy $\pm 2^\circ\text{C}$. Available IR resolutions are 160×120 pixels, 240×180 pixels and 320×240 pixels, with $25^\circ \times 19^\circ$ field-of-view.

Digital timers

Shavison has launched a series of digital timers, which are of four types (push wheel, 3-digit single display,

3-digit dual display and multifunction, three sizes (48mm x 48mm, 72mm x 72mm and 96mm x 96mm). These

are available in six operating modes (on delay, interval, cyclic on first or off first, instantaneous and delayed, forward-pause-reverse and batch counting). The push wheel timer is switch-selectable with down-counting mode having DIP switches on rear side. Other three types of timers are programmable with user-friendly menus.

Particle sensor

Toshniwal Sensing Devices offers a particulate matter sensor, PPD42NJ, for indoor air quality. It detects airborne particles in a room. The sensor is highly sensitive and can detect particles such as smoke, pollen and dust, which are larger than one micron and can trigger many allergic symptoms. Based on the light-scattering method, pulse output that corresponds to concentration per unit volume of particles can be obtained.

Cord flexing tester

Mangal Instrumentation has introduced a cord flexing tester with load for the moulded power cord used in electrical appliances. The tester is used to assure user safety from any short-circuiting at flexible points of the power cords. It
