

is used for continuous bending tests by swivelling movements to check the supply cord where it enters the appliance as per BIS/international standard requirements.

Digital multimeter

KUSAM-MECO has introduced an innovative digital multimeter-cum LCR meter (Model-306). It has three 1/2-digit 1999 counts LCD display. It measures DC voltage ranges from 100µV to 1000V, in five ranges, that is, 200mV/ 2V/ 20V/ 200V/ 1000V DC, with voltage basic accuracy of $\pm 0.5\%$. This multimeter can test diode and

continuity also. It operates on a single standard 9V battery.

Power Analyser

Anritsu introduces Power Master MA24507A, an ultraportable, millimetre-wave (mmWave) power analyser that enables simple, numeric, frequency based measurement of RF power from 9kHz to 70GHz. It leverages Anritsu's patented Shockline technology, along with its leadership in ultra-portable test solution

design to address the growing number of test requirements in mmWave applications, including test of 802.11ad, wireless HD and e-band products, at every stage of the product lifecycle.

In-circuit debugger, programmer

Cyclone Universal FX is an extremely-flexible tool designed for in-circuit flash programming, debugging and testing of many 8-/16-/32-bit microcontrollers from NXP, as well as ARM Cortex devices from a variety of manufacturers. By connecting to a debug header on the target, Cyclone can program, test or debug internal memory on a supported processor or external flash connected to the processor's address/data bus, in-circuit. The processor or memory device can be mounted on the final PCB before programming.

MISCELLANEOUS

Single-display console

This single-display console is made for warships, and is a welded construction of heavy-duty aluminium HE 30 alloy extrusions and sheets. All hardware is suitable for naval applications. The display angle can be made adjustable and keyboard foldable. The console can house any modular sub-rack like VME, CPCI or a rugged workstation. It comes with forced air-cooling with an option to choose air entry and exhaust based on cooling paths.

PLC development platform

Maxim's pocket IO PLC development platform redefines how factories operate and enable Industry 4.0 applications. To maximise productivity,

it provides real-time intelligence to quickly and effectively make decisions, adaptive manufacturing to avoid potential downtime and distributed control to provide redundancy. The pocket IO provides the following key advantages to increase productivity:

- Real-time intelligence
- Adaptive manufacturing
- Distributed control

BLDC motor solution

ROHM Semiconductor has introduced its path-breaking solutions for driving BLDC motors in India. These solutions, compared to the less-expensive AC induction motors, are easy to control and around 50 per cent more efficient, thereby reducing power consumption in home appliances and industrial equipment. These solutions are designed with features to reduce design time and, hence, enable a faster time-to-market.

IoT development platform

WaRP7 development platform presents a new opportunity for IoT and wearable device designers. The platform enables a shorter time-to-market and addresses key IoT and wearables challenges, including battery life, connectivity, usability (user experience) and miniaturisation. Though a tiny form factor (main CPU is approximately 2cm x 4cm), WaRP7 is flexible and offers all advantages of traditional development tools. The open source design allows developers to take the platform as a starting point and innovate without licensing restrictions.
