

handy options like benchmarks and multiple rendering modes for layers.

Handling projects the easy way

Loading projects on Gerbv is easy. Simply use the switch `-p` or `--project` and you can see the layers you designed populating the screen. Just make sure that the project and Gerber files are held in the same folder.

Creating a new project is as straight-forward as creating a bunch of layers, specifying the colours for each, along with background and stackup details, finally combining the entire set into a project of your own. You can also save sessions, creating your own hibernate for your design.

Getting your first steps right

The initial setup is simple. With the package available on many repositories, you can simply use

Get to know your tool

Operating system supported: Linux native; Windows version is available for beta testing

Licence: GPL/free

Supported by: gEDA

Author: Stefan Petersen

Latest release: Version 2.6.1

File format supported: RS-274X

Does not support: RS-274D files

Software repositories with Gerbv: Debian package, Fedora/Red hat, NetBSD, FreeBSD, SuSE

Built and tested on: Linux, NetBSD, Solaris, FreeBSD platforms

- Charles Lepple has built the same on Mac OS using fink.

The little things:

- Can display different drill file formats like Excellon
- Can load unlimited layers simultaneously
- Can handle aperture macros with up to ten levels of recursion

Before beginning with Gerbv, download GTK+ and Cairo packages, a graphical toolkit and a graphics library, respectively.

your favourite yum or apt-get commands to download the files into your personal computer. Just make sure that the tool has the necessary graphics support from GTK+ and Cairo to meet your graphics

requirements and light up your screen just right. **EFY**
