

USEFUL WEBSITES

SENSORS

This month we have some websites that will enlighten you on what a sensor does and where to get one. A sensor is an electronic device that can be used for a variety of smart projects

Compiled by **NIRAJ SAHAY**

sensorsmag.com

The website provides focused news in markets where sensor and related technologies are applied as part of a company or organisation's business and competitive strategy. It has in-depth technical articles and tutorials on sensors, their theory of operation and how to use these effectively. It also has case studies on how sensors and sensor-related technologies are used in real-world applications.

my.st.com

STMicroelectronics e2e Communities is the place to exchange opinions, ask questions, find answers, propose solutions and more. Here, you can participate and help build support communities for engineers with engineers. The site has a forum for micro-electro-mechanical systems and sensors, which covers discussion on accelerometers, e-compasses, gyroscopes and proximity sensors.

sensorsportal.com

Sensors Web Portal Inc. was registered in 2001 (Canada) in order to host the biggest free-access information-rich Internet-specialised recourse devoted to sensors, transducers and sensor instrumentation. It effectively fills the role of an information broker for the information seeker in that subject, and identifies useful quality, reliable online resources. It is an important gateway for anyone working in sensor-related fields where there is a significant mass of online source material. This monthly-update website keeps you updated with sensor industry news, too.

mouser.in

If you are searching for sensors for your project, this website is a good place to get one. It has approximately 65,000 different sensors from industry-leading manufacturers. Mouser is an authorised distributor for many sensor manufacturers including Amphenol, Analog Devices, Broadcom, Grayhill, Honeywell, Littelfuse, Maxim Integrated, NXP, Omron, Schneider Electric, TE Connectivity, Texas Instruments, TT Electronics and the like. The website also has around 17,700 datasheets of different sensors—perfect for advance users and hobbyists alike.

Thinking on where to get the sensor needed for your project. Adafruit has a sensor category, where you can find everything you need to start measuring temperature, motion, force, flow and more. You can also check out Sensor Pack 900, which is a must-have kit for beginners. With a wide and growing range of sensors, Adafruit's sensors category is the best place for all your needs.
