

Indian electronics industry doing well

According to a joint study by ASSOCHAM and Ernst & Young, the Indian electronic products industry in India is expected to grow at a CAGR of 10.1 per cent to reach US\$ 75 billion by 2017 from US\$ 61.8 billion in 2015. With increasing penetration across consumer products, especially in semi-urban and rural markets, along with government's push for infrastructure development, locomotive and energy,

there exists a significant opportunity for rapid expansion of this industry.

The electronic components industry in India was valued at US\$ 13.5 billion in 2015, growing from US\$ 10.8 billion in 2013 at a CAGR of 11 per cent. The market is dominated by electromechanical components (such as PCBs and connectors), which form 30 per cent of total demand, followed by passive components (such as re-

sistors and capacitors) at 27 per cent, according to the study.

India's attractiveness for manufacturers is growing due to availability of low-cost labour. Rising manufacturing costs in China and Taiwan are compelling manufacturers to shift their manufacturing base to alternate markets. In 2014, average manufacturing labour cost per hour in India was US\$ 0.92 as compared to US\$ 3.52 of China.

Indian security market can reach US\$ 1.24 billion by 2017

Enterprise security spending (hardware, software and services) in India is on track to reach US\$ 1.12 billion in 2016, up 10.6 per cent from US\$ 1.01 billion in 2015, according to Gartner Inc.

Security spending will continue to grow in 2017 when revenue is projected to reach US\$ 1.24 billion. Security services (that include consulting, implementation, support and managed security services) revenue accounted for 61 per cent of this total revenue in 2015, and it can increase to 66 per cent by 2020.

"Strong growth in the security services market will be primarily because customers need external services to transform their security posture in the digital business era. Security services are typically categorised as either implementation, consulting or security outsourcing services, and many providers are beginning to offer all three categories to address customer requirements," says Siddharth Deshpande, principal research analyst at Gartner.

He adds, "In 2016, we are seeing large enterprises increase their security budgets to enhance their security programme, and several midmarket
