NITI Aayog's suggested policy boost for electronics manufacturing

NITI Aayog is likely to seek Union Cabinet's approval for a long-term policy to boost electronics manufacturing, which will provide a host of incentives like a ten-year tax holiday, in order to attract investments. In view of the great potential of the electronics manufacturing sector, NITI Aayog has prepared a draft strategy paper titled 'Make in India-Strategy for Electronic Products.'

Rajasthan to be powered by solar energy

Barmer district in Jaisalmer, Rajasthan is coming up with a unique solution to ensure that water issues never crop up. Rajasthan Electronics and Instrumentation Ltd, the firm currently handling the project, has been given the green signal to spend ₹ 119.1 million for the entire project. The project and the solar tubewells will be initially handled by a private firm for five years, post which these will be handed over to the government, which will take over their working.

Mobile handset manufacturing is now a ₹ 540 billion industry

According to data compiled by Indian Cellular Association (ICA), the industry body representing mobile phone brands, handset manufacturing in 2015-16 rose a robust 185 per cent in value terms to ₹ 540 billion from ₹ 190 billion in 2014-15. ICA estimates that manufacturing activity will touch ₹ 940 billion this fiscal year.

to photos and videos. The MNRE directive has asked nodal agencies in states and public sector units to regularly update details of commissioned projects with additional information like latitude and longitude of sites and photographs of the projects. It asked all other stakeholders, including new entrepreneurs, to update details of their projects by October 30, 2016, with the ministry.

NOIDA to be developed as electronics hub

Uttar Pradesh chief minister, Akhilesh

Kerala to have solar-powered e-rickshaws soon

Kerala will soon have solar-powered three-wheelers on its roads. The solar panels fitted on the roof of the three-wheelers will provide power stored in a battery. The battery can be charged by electricity in the absence of solar power.

The company partnered with Dotcom, one of the leading entities dealing in computer and computer accessories in this region for many years. Dotcom has been Acer's partner for 13 years.

Yadav, has said that NOIDA will be developed as a hub for electronics, where a number of youths will get jobs. The result of the state's investment-friendly policies are becoming visible on the ground, and a large number of investors are showing keen interest in the state, the chief minister said, while signing a flexi agreement between Lava International and Uttar Pradesh Skill Development Mission. He added that companies will also be requested to provide training and jobs to the youth, under the mission.

Electropreneur Park set for launch in New Delhi

The government-funded Electropreneur Park, an incubation centre to increase domestic electronics manufacturing is scheduled for launch in New Delhi.

Electropreneur Park with funding support from Ministry of Electronics and Information Technology is being set up in South Campus, Delhi University. It will focus on IP creation and indigenous product development to increase value addition for locally-manufactured electronic items like smartphones, smartmeters, micro-ATMs and set-top boxes.

GE aims for US\$ 1.4 billion from 3D printing

US conglomerate General Electric (GE) has announced its interest to buy two European companies (Arcam AB of Sweden and SLM Solutions Group of Germany) that specialise in 3D printing for US\$ 1.4 billion. The two companies would be put under GE's aviation division.

Established in 1997 and based at Molndal in southern Sweden, Arcam AB uses electron beams in 3D printing of metallic parts for aeronautics and healthcare industries. It employs about 285 people, and had revenues of US\$ 68 million in 2015.

SLM Solutions Group, based in Lubeck, Germany, makes laser equipment for use in 3D printing, also known as additive manufacturing, for aeronautics, energy, healthcare and automobile industries. It had revenues of US\$ 74 million in 2015.

The conglomerate expects to reap up to US\$ 1 billion a year from 3D printing by 2020 and anticipates economies in production costs of the order of US\$ 3 to US\$ 5 billion over the next ten years. GE plans to keep the headquarters of the two companies in Europe, using it as a base for developing a global 3D printing business.
