

FEEDBACK

YOUR SUGGESTIONS

EFY DVD

VirtualWiFi included in EFY DVD of August issue is a useful software. It works well with Nano Adaptor 802.11N Wi-Fi dongle, which was initially purchased to receive Wi-Fi signals. Now, the same Nano dongle works in two ways, thanks to this new software.

EFY. Thanks for the feedback!

EFY CONTENTS

I have been reading EFY for the last ten years. Fifty per cent pages of EFY magazine are filled with advertisements. It should be minimised so that subscribers get the real value for their money. More technical information/content should be published instead.

EFY. Thanks for sharing your feedback. We appreciate the fact that you took out time and shared your thoughts with us. Our perspectives on this issue are listed below:

1. EFY has been maintaining a ratio of 60:40 to 50:50 (editorial:ads) since long.

2. Why? Because the truth is, we incur a loss on every copy sold—be it subscribers or news-stand readers.

3. Advertising is the only way we are able to balance the losses, as well as pay for the people who work at EFY, or contribute content.

4. Many of our readers value ads too, especially those in purchase-related or leadership roles, since they get to know about new suppliers and competitors in the market.

5. Most importantly, in almost every issue, as the number of ads

increases, the number of editorial pages increases, too, thus, creating a win-win for our readers.

6. We consider ourselves fortunate that so many people find it worth advertising in EFY magazine. Surely, they must be benefiting, too.

Hope you will agree with us that EFY is working on fair-principle basis, where we are not taking away editorial pages away from our readers to publish ads, but are actually sharing rewards with them, when we get more ads.

IoT BASED PROJECT

In 'IoT-Wi-Fi Temperature-Logging System' DIY article published in March issue, in the source code 'x = strstr(&value, "OK"); if (x-32 < 0)' is used. Please explain why 32 is used here.

Siti Maslaina

Through email

The author Osho Kumar replies:

If you look closely at ASCII table, you will note that there are 31 characters that include some special characters like '\t', '\n', etc. Actual characters start from space, that is, ASCII 32. Also, output received from strstr function is in char-type pointer. You can compare it with a null object ('\0') but I prefer to check with a threshold-like space. I hope this clears the doubt.

CRYSTAL TESTER

This is regarding 'Portable Crystal Tester' DIY article published in August issue. Can we test this circuit on Multisim or any other simulation tool?

Rohit Tiwari

Through email

The author Joy Mukherji replies:

Yes, Multisim is widely used in aca-

Corrections

In 'Sound-Operated Device-Control System' DIY article published in September issue, in Fig. 7, pin 20 of IC1 (AT89S51) should be connected to GND.

Tapan Mojitra

In 'Wireless Display Using Arduino' DIY article published in September issue, in Fig. 2, 'RX1=434MHz RF transmitter module' should be written as 'RX1=434MHz RF receiver module.'

Anoop Jayaram

EFY. Thanks for pointing out the mistakes!

demia and industry for teaching electronics theory, circuit design and SPICE simulation.

EFY PROJECTS

Please publish battery charger circuits for charging batteries like 20Ah, 33Ah, 40Ah and so on. Also, kindly publish audio amplifier projects of higher wattages like 50 watts and 100 watts.
