Recommendations given for defence electronics and system design policy

India Electronics and Semiconductor Association (IESA), National Association of Software and Services Companies (NASSCOM), along with Roland Berger, a leading global strategy consulting firm with expertise in defence, gave their defence electronics and system design policy recommendations at DEFTRONICS 2016, the annual flagship aerospace and defence event. The recommendations are based on current aerospace, defence and internal security trends and needs to provide guidance towards the

formulation of defence policies by the Union ministry.

The policy recommendations indicate that India not only needs to create world-class companies, but it is imperative to bring them in the global value chain of original equipment manufacturers. These suggest that the government needs to provide Indian companies with required visibility, timely closure of contracts, technology transfer and manufacturing push through certain initiatives and incentivisations.

In order to promote exports

of defence electronics, the policy recommendations have stated the need for an introduction of a multiplier that will ensure an export base of defence electronics around valid technologies.

Moreover, according to the recommendations, defence public sector undertakings need to leave control of the supply chain and the government needs to ensure more opportunities in the private industry.

India's aerospace and defence electronics market is estimated to be around US\$ 72 billion.

Defence Production Policy aims to boost indigenous manufacturing

The Defence Production Policy promulgated by the government of India aims to achieve substantive self-reliance in the design, development and production of equipment, weapon systems and platforms required for defence in as early a time frame as possible.

It aims to create conditions conducive for the private industry to take an active role in this endeavour, enhancing the potential for small- and medium-sized enterprises to take part in indigenisation and broadening the defence R&D base of the country.
