

BINAY PowerLED Inspection Hand Lamps utilize a light source comprised of multiple high power white LEDs

- Very low power consumption of 10 watts or less
- Long life (over 50,000 burning hours), covered under 3-year warranty
- Unbreakable shock-proof and vibration-resistant construction; cool light output with no heat radiation
- Glare-free light output, focusing only on the work area

POWERING LED TECHNOLOGIES WORLDWIDE SINCE 1983

China tests viability of quantum technology for secure communications

China has launched QUESS satellite that will test for the first time the viability of quantum technology for secure communications over long distances.

China's quantum satellite is nicknamed Micius, after a 5th-century-BC Chinese scientist (Image courtesy: www.siasat.com)

The 1.65kg Galassia nano-satellite, built by researchers at National University of Singapore (NUS), Singapore, carried a science payload of the size of a shoe box containing the basic components used in quantum communication and computing. Galassia was one of the six Singapore satellites that were launched by India's Polar Satellite Launch Vehicle in December 2015.

The compact device, dubbed Small Photon-Entangling Quantum System (SPEQS), contains a laser diode, crystals, mirrors and photon detectors. It creates pairs of light particles called photons and measures the pairs' properties—all on board the satellite.

According to the university website, analysis of data from the satellite "shows that SPEQS is making pairs of photons with correlated properties," which is an indication that the device is performing as expected in orbit.

Temporary tattoos to control connected devices

Massachusetts Institute of Technology (MIT), USA, in partnership with Microsoft, has created a new touch interface, DuoSkin, which allows temporary tattoos to interact with smartphones or computers, display output based on body temperature changes and even transmit data using near filed communication.

BINAY Multichip LED Lamps

High reliability direct-retrofit LED bulbs for Control and Instrumentation applications

	
Ba9s bayonet pin cap	E-10 screw cap
	
Midget Flange cap	Midget Groove cap
	
5530 and 6844 slide base	Wedge base

Simple retrofits for existing filament bulb holders, in applications such as annunciator window (fascia) backlighting and illuminated pushbutton switches, where the reliability of indication is important or where lamp replacement is difficult or expensive

- Long life (typically 100,000 hours)
- Low power consumption;
- Low heat generation
- High brightness and wide-angle light emission
- Shock-proof and vibration resistant
- High reliability of indication
- One-time Expense
