

iSeries

Ensure Performance with EMI Shielding

Our iSeries product line currently offers electromagnetic shielding to preserve signal integrity during operation. From stainless steel fibers, to threaded metal couplings, to all-metal backshells, the iCon and the i2 MX have options to safeguard your signal transmissions.

iSeries connectors feature interchangeable contacts that are universally accepted in all of our connectors. Choose from signal, power, coaxial, fiber, or high speed (VTAC) to help you create the perfect solution for your application.

Our Wire+ Advantage provides engineered, manufactured, and quality tested wire products. Cable assemblies can be terminated to any vendor connector, left with flying leads, or configured to be double-ended.
