ULTRA-LOW-POWER EXCELLENCE WITH PERFORMANCE

- The STM32L4 microcontroller is based on a new ultra-low-power platform featuring Flex Power Control which extends flexibility to reach optimized power consumptions: with an EEMBC ULPBench score of 177 ULPBench™-CP, the STM32L4 Outperforms the market in the ultra-low-power domain.
- Offering up to 1 Mbyte of Flash (dual bank) memory and 128 Kbytes of SRAM, the STM32L4 unleashes the ARM Cortex-M4 power efficiency with floating point unit (FPU) and DSP instructions. It delivers 100 DMIPS / 273 CoreMark thanks to the ST ART Accelerator™ at 80 MHz. The entire system performance is optimized using a multi-AHB bus matrix and DMA controllers.
