

by which such electives can be started either in collaboration with an automobile industry or inter-departmental collaboration.

The subject needs to be introduced at diploma level to train the manpower in association with industries. The student may need to spend about two to three weeks in the industry with direct supervision to complete the implant training.

The way forward

Introduction and study of such multidisciplinary fields is not only an eye opener for students, faculties, scientists or engineers, but also a major area where automobile industries are involving ICT manufacturing and production domains to enhance the quality of the product and present systems.

At university and institute level, we can create ready and employable manpower with industrial needs. It will reduce our efforts to train newcomers. Employment opportunities for under-graduate students from all branches will increase instead of only core branches like mechanical, mechatronics and automobile.

Skill India Programme is supported by such industry based electives. Ministry of Heavy Industry and Public Enterprises is the parent body for automotive industry in India and administers the auto policy of the government of India. The ministry formulates policy guidelines and framework to promote enduring and self-sustained growth of the Indian automotive industry. The vision of the auto policy envisages the establishment of a globally-competitive automotive industry in India and enhances its contribution to the economy by 2016.

Keeping in track the broader growth, Ministry of Heavy Industry and Public Enterprises has undertaken active handholding with the Indian automotive industry, and has conceived, developed and steered National Automotive Testing and R&D Infrastructure Project (NATRIP).

The ministry is the focal ministry for implementation of NATRIP through NATRIP Implementation Society (NATIS) Governing Council.

NATRIP

NATRIP, the largest and one of the most significant initiatives in the automotive sector so far, represents a unique joining of hands between the government of India, a number of state governments and Indian automotive industry to create state-of-the-art testing, validation and R&D infrastructure in the country.

The project aims at creating core global competencies in the automotive sector in India and facilitates seamless integration of Indian automotive industry with the world, in order to position the country prominently on the global automotive map.

Automotive Skills Development Council

National Skill Development Corp. (NSDC) and Ministry of Heavy Industry and Public Enterprises have started a special skill-development council in association with automobile industries called Automotive Skills Development Council. The main objectives of the council are:

- Find gap areas in existing skills of human resources and develop modular training courses to meet industrial needs
- Improve competitiveness by integrating new requirements such as fuel cells, electric cars, new materials, telematics and mechatronics with automotive engineering
- Improve and standardise output of courses through industry-institute links and partnership
- Ensure quality through a transparent certification process

Projected outcomes of successful development of infotronics and informatics in automotive industries can be seen in terms of growth of the nation and various major initiatives like Make In India, Digital India and Skill India. **EFY**

SUSPENSE

Are You In Suspense?

Are you wondering what happened to your order or payment, even after a fortnight? But did you mention your name and address clearly while sending payment, and what the payment was for?

We get several payments every month without adequate instructions or even identity of the person sending the payment. As a result we are unable to take appropriate action on these, till we get a complaint - if at all.

At EFY, we want you to be our satisfied customer. So please do let us know in case your payment or instructions are not even acknowledged within a fortnight. We are not that lazy!
