NET-METERING IN INDIA

In 'Net-Metering In India: Way To A Secure Power Future' article published in August issue, the map of India shows the states where net-metering guidelines are in place (Fig. 1). As per the map, net-metering guidelines have not been issued by the state of Telangana.

We wish to bring to your notice that the state of Telangana has undertaken pioneering initiatives to promote the cause of solar capacity additions in the state such as announcement of a progressive solar power policy, finalisation of the large-scale procurement of solar power in a single tender (2000MW) and so on.

Net-metering is actively promoted in the state of Telangana ever since its formation. All relevant documents pertaining to solar net-metering can be accessed at www.tssouthernpower.com under net-metering section.

It may also be noted that in the state of Telangana, 9.903MW solar roof-top projects have been already commissioned—among the highest in the country. Technical feasibility has been issued for another 24.199MW.

Hence, representation on net-metering guidelines shown in the article cited above is not correct. This may be corrected at the earliest.

G. Raghu Reddy

CMD/TSSPDCL

The author Tanya Batra replies:

Thanks for sending this over. In each of the documents, what has been referred to is Andhra Pradesh. I would like to apologise for under-representing the state of Telangana. It was an honest mistake, since these policies were released before the state of Telangana was created. And no policy has been made with Telangana

'PIN Diode Based Fire Sensor' article published in February issue is an interesting one!
Ahmedee Muktar

'PIN Diode Based Fire Sensor' article is a good DIY tutorial.
Adeyemi Babatunde

EFY. Thanks for the feedback!

In 'Play With Robotic Eye (IR Sensor)' article available on <http://electronicsforu.com/electronics-projects/play-with-robotic-eye-ir-sensor>, pins 10 and 15 in the table have been interchanged.

Thaer Shabo

EFY. Thanks for pointing out the mistake!

'Home Automation System Using A Simple Android App' article available on <http://electronicsforu.com/electronics-projects/hardware-diy/home-automation-system-android-app> is a very useful project. This system can be used for many other purposes. You can even use MIDI software to control home automation. There are many ways to accomplish this goal with engineering.

Kieron Seymour-Howell

I would like to thank you for posting 'Home Automation System Using A Simple Android App' on your website.
Htin Lin

'Home Automation System Using A Simple Android App' is a good project.

Atiqur Rahman Atiq

Corrections

In the 'Q&A' in August issue, the link www.tutorialspoint.com/vlsi_design_digital_system.htm in A2 for Q2 is wrong.

Design flow should include design specifications, schematic, symbol creation, simulation, layout, DRC, extraction and post-layout simulation.

Pramod Kumar

EFY. Thanks for pointing out the wrong link mentioned there. The correct link is: www.tutorialspoint.com/vlsi_design/vlsi_design_digital_system.htm

Here, the goal is to understand the general and key components in VLSI design flow. VLSI is a big domain and can be categorised in two sub-domains: VLSI front-end and VLSI back-end.

In 'Low-Cost Quadraphonic Amplifier' article published in August issue, in component layout of the PCB (Fig. 3), '+' and '-' signs at CON9 should be reversed.

Adil Khan

EFY. Thanks for pointing out the mistake!

written in the document. I will cover a story on Telangana on our blog.

INDEPENDENCE FROM GPS

In 'IRNSS: India's Attempt at Gaining Independence from GPS' article published in August issue, IRNSS should be expanded as Indian Regional Navigation Satellite System, instead of Indian Regional Navigation Spacecraft system, as mentioned in the article.

Adil Khan

Through email

EFY. The published expansion has been mentioned on ISRO website www.isro.gov.in/irns-programme/towards-self-reliance-navigation-irns
