

Online User Groups and Communities

Last month's 'Useful Websites' featured some active forums from the companies themselves. In continuation, here are some more

MATLAB Central

MATLAB Central serves the community of people who use MATLAB, Simulink and other MathWorks products to share expert techniques, features and information about the latest developments. It consists of five major sections: the File Exchange, where people upload and download code, a Question and Answer area called MATLAB Answers, a discussion forum called the Newsgroup, a place to share bookmarks and Web links called the Link Exchange, and a collection of blogs written by MathWorks employees.

Intel Embedded Design Center (EDC) and Community

Intel Embedded Design Center (Intel EDC) provides registered users with fast access to in-depth technical collateral and tools for leading embedded platforms. There are two levels of registration—basic and privileged. While basic level provides open access to public content on the site, privileged level gives password-protected access to confidential Intel information including schematic and layout files and specification models, in addition to technical training, electronic support and Intel's Embedded Hardware Test Tool Loan Program.

Altera Forum

The Altera Forum brings Altera users together to learn from each other. You can share projects, news and ideas related to Altera products to make your experience with the products better. With free registration to the forum, you can access all the information related to development using Altera's FPGAs. You can enter details of events in the forum's calendar and also set a buddy-list to quickly see which of your friends are currently online.

EFY's Electronics Design Community

Electronics For You group has been serving electronics design engineers, hobbyists and experimentalists through its construction projects and circuit ideas in the magazine. This online community is created to increase its connect across the world. Professionals and budding engineers get their electronics design related queries answered through interactions on the Facebook page. This is a vendor-neutral webpage focusing on design engineers, giving them a fair and unbiased view. As of March 2011, there are 16,000 plus fans.
