

EDUCATIONAL AND HOBBY KIT PROVIDERS

See Busy Years Ahead

Companies are looking for workforce trained in various technologies to cut short their on-the-job training requirements. This, coupled with mushrooming of technical institutes, promises a never-dying demand for educational kits

new technology in their designs and products with ease.

Apart from industries, educational kits are used in educational institutions too. Besides giving a first-hand experience and deep understanding about the underlying technicalities of scientific principles, these act as major catalysts in goading the scientist in students.

Market size quite big

Educational and hobby kits is an ever-growing industry. Particularly, in India, this industry is quite big and growing fast. The Indian market size for test, measurement and trainer kits in colleges could be to the tune of Rs 2 billion.

“Practical learning through edu-

■ UMA BANSAL

Electronics is one field where constant learning is a must to keep pace with the technology. An electronics professional who graduated a decade ago is as good as a layman if he does not update his knowledge.

Educational kits of various types help professionals to upgrade. They help them become familiar with the use of latest components. So manufacturers make it a point to bring out learning kits along with their new ICs, CPUs, etc to help designers adopt the
