Go for a camera that lets you take good-quality pictures with minimal effort. There are many features available today to make shooting more convenient

■ UMA BANSAL

Capturing interesting moments was never so easy before digital cameras came into the picture. Many kinds of digital cameras are available today.

Equipped with a variety of features, these make it easier even for an amateur to click great-quality pictures.

Given the many options to choose from, finding the right camera within

your budget can be daunting, especially if you are a beginner. A good way to choose a camera, however, is to go for the features that give you a superb image quality while enhancing your photo imaging experience as well.

How to go about various features

To start your selection process, ascertain what you need: A small and compact pocket camera, an advanced

camera, a high-zoom camera, or an SLR camera? Look out for megapixel count, zoom, image sensor, battery-type (lithium or normal) and its life, file format, storage, movies and sound.

You could then consider features that make using the camera and taking great shots more convenient. These may include automatic light adjustment, automatic flash, red-eye reduction, image stabiliser, manual controls for aperture and exposure,
