

Testing Becomes A Breeze With Open Source Tools

Like Software Testing Automation Framework, loadUI, OpenSTA, System Stability Tester and IENetP

What's EFY-CD all about?

Welcome friends! Wondering what goodies we have in the EFY-CD? Allow us to reveal all! There are three to four different categories of software that we feature every month, most important of which is the 'Design and Simulation' category. It comprises various electronics software, datasheets, e-books, circuit ideas and EFY software. The CD also contains three other sections: Resources, Fun and Utility. 'Resources' contains essential software like Acrobat Reader, Enzip and a few others, which form the basic requirements of any PC. The 'Fun' segment includes computer games, whereas in 'Utilities' you will find multimedia and IDE software, Internet applications, etc.

System Stability Tester

System Stability Tester is a multi-platform Open Source clone of SuperPI and comes with a GUI and a CLI. It tests the system's stability by calculating up to 128 millions of Pi digits. It can be used for CPU and RAM burning, stressing and benchmarking.

Software Testing Automation Framework

The Software Testing Automation Framework (STAF) is an Open Source multi-platform, multi-language framework designed to improve the level of reuse and automation in test cases and test environments. It can be leveraged to help solve common industry problems, with more frequent product cycles, less preparation time, reduced testing time and more platform choices. The goal of STAF is to provide a complete end-to-end automation solution for testers.

IENetP

Industrial Ethernet Network Performance (IENetP) test tool determines the network performance of industrial devices using a standard set of metrics and tests.

loadUI

loadUI is an enterprise-grade free and Open Source cross-platform load-testing tool. Tests can be distributed and modified in real time. Creating and planning your tests in loadUI is a breeze.

Featuring an innovative and intuitive interface, loadUI sets a new standard for test creation. Powerful yet easy-to-use features let you do just about anything with your tests.

OpenSTA

Open System Testing Architecture (OpenSTA) is a distributed software testing architecture designed around CORBA. It is Open

Source, licenced under the GNU GPL. The applications that make up the current OpenSTA toolset were designed to be used by performance testing. It can perform scripted Web (HTTP and HTTPS) heavy load tests with performance measurements from Win32 platforms.
