

Maximize Crane Productivity Using Industrial Wireless

- Reduced cable installation and maintenance cost
- Zero data loss in harsh RF environments
- Safe and reliable crane control networks
- Cost-effective and future-proof networking

Absolutely Reliable Wireless LAN Connectivity

Many heavy industries, such as steel, mining, offshore, and shipyard applications, use cranes as part of their daily operations. The key factors to improving crane productivity are safety, reliability, availability and cost-effectiveness. It's also crucial to ensure that systems are future-proof by designing them to be flexible and durable. Moxa's industrial WLAN products guarantee absolutely reliable WLAN connections and operate at high standards of efficiency, productivity, and safety in crane automation.

- WLAN standards: IEEE 802.11a/b/g
- Full redundant technology
 - Wireless redundancy via dual RF modules
 - Ethernet redundancy via RSTP and Moxa Turbo Ring
 - Power redundancy via dual DC inputs and PoE
- Fast roaming for seamless mobility
- QoS to prioritize mission-critical traffic
- Interference-proof design for zero data loss
 - 2.4 and/or 5 GHz bands, Level 3 EMS and metal housing
- Flexible WLAN AP architecture for long-haul communications
- Outdoor rating: IP68 and -40 to 75°C

Seamless Mobility, Uninterrupted Connection
