Logical partitioning in COSEC software

Matrix Comsec has introduced a software license structure by implementing logical partitioning in COSEC (time attendance and access control system). With this new structure, COSEC application servers—COSEC PE/GE/ME/LE platform—will come with basic features.

These platforms are completely Web-based with key features like basic report generation, hardware configuration, export and import data and many more.

Computing platform

Kontron has introduced a new high-performance embedded computing (HPEC) platform designed for military-aerospace digital signal processing (DSP) applications.

The VPX-based platform accommodates up to 18 Kontron 6U VPX VX6060s, powered by dual Intel

Core i7 processor computing nodes, and employs 36 tightly coupled processors. The 72 core, 18-blade platform provides a compute density up to 1.44 Teraflops (1.44 trillion floating point operation per second) in a 48.26cm (19-inch) footprint. Potential applications include radar, sonar, SIGINT and video processing for various aircraft or UAV programs.

MISCELLANEOUS

Multicore platform

Freescale Semiconductor has introduced T4240 device to its QorIQ advanced multiprocessing (AMP) series.

The device integrates a host of hardware accelerators with twelve dual-threaded e6500 cores, providing 24 threads to address high-end data plane processing applications. The e6500 incorporates an enhanced version of AltiVec vector processing unit. AltiVec technology addresses high-bandwidth data processing and algorithmic-intensive computations. Application include metro carrier edge routers, access gateways and aerospace/defense products.

EEPROM

ON Semiconductor has released electrically erasable programmable read-only memory (EEPROM) device for the automotive, medical, and consumer markets.

The 1Mb CAT24M01 has a 1.8V to 5.5V supply voltage range. It employs

128byte page write buffer and supports standard 100kHz, fast 400kHz and fast-plus 1MHz serial I2C protocols. The device is manufactured on a 0.18micrometer low-power CMOS process and is available in lead-free, RoHS compliant SOIC-8, TSSOP-8 and PDIP-8 packages.

Card reader

Silicon Power has launched a USB 3.0 all-in-one card reader.

Containing five card slots for simultaneous read and write, the 55gm card reader supports high-speed SDXC UHS-1 memory card and Ultra DMA mode 7.

The 73×50×13mm³ reader runs on CF600X high-speed memory cards and supports 5Gbps super-speed, 480 Mbps high-speed, and 12Mbps full-speed transfer rates. It contains a 50cm USB cable and is compatible with USB 3.0, USB 2.0 devices.

Attendance cum access control system

Emsoniq Telecom & Technology has launched a fingerprint-based attendance cum access control system.

The system features 2500 finger templates with 65,000 transaction storage capacity. It can communicate for data transfer by RS232, LAN and USB pendrive. The system offers graphic LCD, voice prompts at a sixteen-key pad

user interface. It also supports a magnetic lock for door access control.
