Consumer spending on digital information to reach \$2.1 trillion in 2011

Worldwide consumer spending on digital information, and entertainment products and services is expected to increase to \$2.8 trillion by 2015, according to Gartner. Also, consumer spending on digital information and entertainment products and services is projected to reach \$2.1 trillion in 2011.

Of the \$2 trillion that consumers spent globally in 2010 on digital information and entertainment products and services, the largest spending segment (62 per cent) was for communications subscription-based access and usage services. The \$1.2 trillion included mobile and wired voice services; mobile data services, such as SMS/TXT and broadband; fixed broadband services; video services, such as subscriptions to pay TV; and online gaming.

Growing domestic market to drive India's innovation growth

Zinnov Management Consulting has launched its study on India's innovation potential and growth titled 'India Innovation's Thrust—Driven by Start Ups & MNCs.' The study predicts that India is at the cusp of becoming an epicentre for global innovation, which is driven by the timely amalgamation of multiple factors, viz, domestic market, global aspirations of Indian firms and the need for innovation to succeed.

The Indian government has earmarked \$9 billion for investment in IT initiatives over the next five years; 12 per cent year-on-year rise in IT spending allocation to states. The study predicts that IT spend in India is poised to grow to over \$50 billion in the next five years, which presents

The next decade will play a crucial role in the evolution of India's IT ecosystem, which will also have a significant bearing on the innovation growth story," said Pari Natarajan, co-founder & CEO, Zinnov Management Consulting.

Worldwide SaaS revenue to grow 21 per cent in 2011

Software as a service (SaaS) revenue is forecast to reach \$12.1 billion in 2011 worldwide, a 20.7 per cent increase from 2010 revenue of \$10 billion, according to Gartner.

The SaaS-based delivery will experience healthy growth through 2015, when worldwide revenue is projected to reach \$21.3 billion.

"After more than a decade of use, adoption of SaaS continues to grow and evolve within the enterprise application markets. This is occurring as tighter capital budgets demand leaner alternatives, popularity and familiarity

with the model increases, and interest in platform as a service (PaaS) and cloud computing grows," said Tom Eid, research vice president at Gartner.

Gartner estimates that 75 per cent of current SaaS delivery, as measured by revenue, could be regarded as cloud services, and this could exceed 90 per cent by 2015 as the SaaS model matures and converges with cloud service models.

Indian IT sector saw maximum employment in 2010

Nearly one million jobs were created in the organised sector in India during 2010-11, according to the data released by the ministry of labour and employment. Almost 70 per cent of these jobs were created in information technology and outsourcing sectors.

Indian IT and outsourcing sectors have been witnessing impressive growth despite a series of anti-outsourcing measures including hike in visa fees taken by the US government.

Overall employment increased by 979,000 with highest increase of 665,000 in information technology and

In Focus

Having been with Danfoss since 1997, an important aspect of Noel's new role will be to establish support to the group's growth and also ensure the companies continued expansion in the country.
