

MICROCONTROLLER PROJECTS

Here we present some websites for students and hobbyists to build microcontroller-based projects. These websites are easily accessible to practice learning-by-doing

Ardino Play Ground

The Arduino official site has a section where you can find a list of Arduino-based project ideas. Arduino is an Open Source physical computing platform based on a simple microcontroller board. The list is helpful for both novice and the experienced. The project ideas have been divided into three categories for easy navigation—easy, intermediate and advanced.

Electro Friends

This is a one-stop educational site for electronic and computer students. It has a list of projects for microcontrollers and basic electronics. The site also includes projects and tutorials for computer students. Electro Friends allows you to submit your own projects and articles related to electronics and computer. The site does not have any forum but has a community page at facebook.com.

Electronics Project Design

Microcontroller-based projects have increasingly become a norm in the lives of students, teachers and controls designers. The site has a collection of different projects and circuits that you can experiment with. It also includes articles on the importance of reliability testing, electromagnetic compatibility (EMC) testing, failure mode effect and analysis (FMEA), fundamentals of electronic parts and test/measurement tools that are needed before you embark on your journey of building your own electronics projects.

Build Your Own Microcontroller Projects

The site has schematics and software for hobbyists and electronics engineers to build and learn microcontrollers at home. It includes projects related to AT89C2051/4051; 8051 Family; AVR; PIC; Motorola and Intel x86. The site is a part of King Mongkut's Institute of Technology Ladkrabang, Bangkok, and is copyrighted by Wichit Sirichote, who is an associate professor of applied physics at the institute.

Projects of 8051

This site is for electronics students and hobbyists with its extensive range of microcontroller-based project kits and AVR projects. The site also includes 'Learn 8051' section, where one can find a range of assembly codes and interfacing circuit diagrams. The list of '8051 based Microcontroller Projects' section has details of projects that can be purchased online from the site.
